AvePoint Public Sector  
Principal Solution Engineer

I sell software, but my passion is to help translate the needs of the business into the capabilities of available technology. Over two decades in tech I have helped customers analyze collaboration solutions against actual mission needs in helping them select the best path based on their personal critical success factors. Per my training I'm a project manager, an engineer, an architect, and a designer; but ultimately, I'm a problem solver.

Jay Leask, AvePoint Public Sector

# Today's Goals

Jay's Excruciatingly Selective SharePoint History

Why nested Sites Cause Problems Today

An approach to Information Architecture

# Jay's Excruciatingly Selective SharePoint History

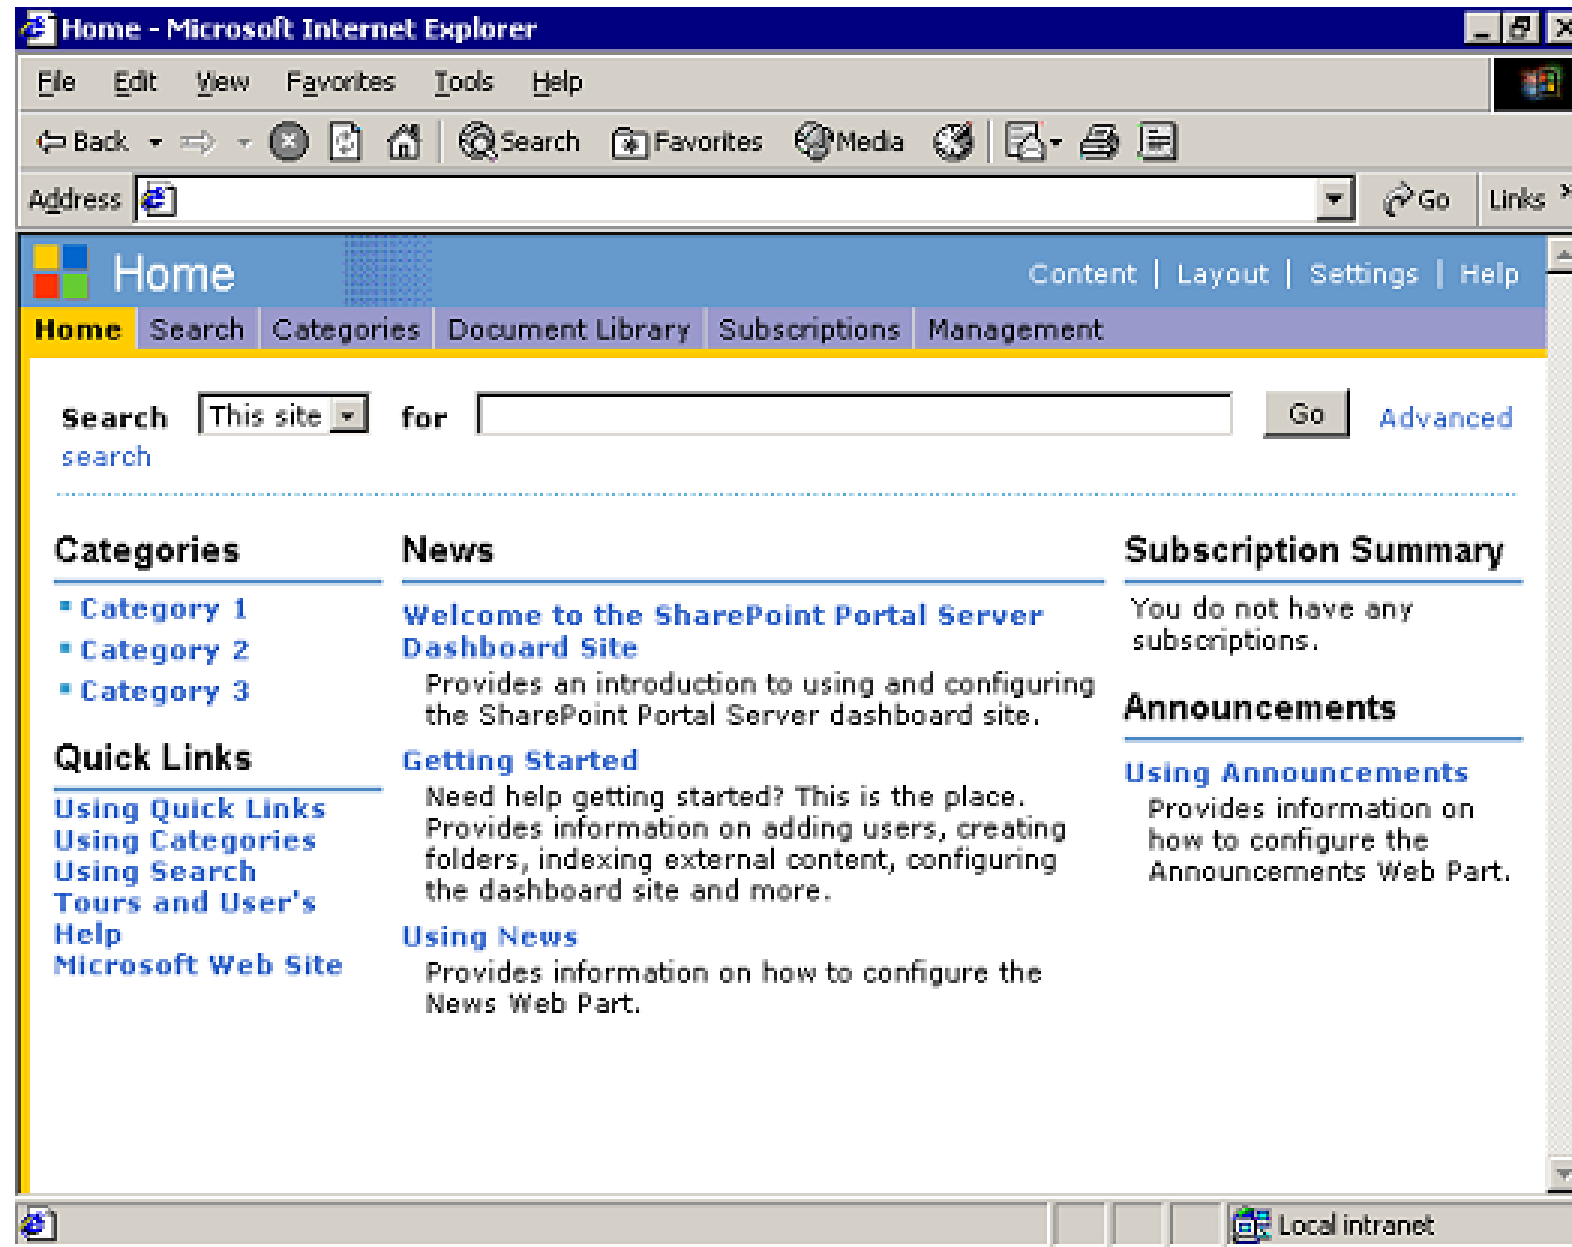

---

Microsoft 365 and Power  
Platform India User Group

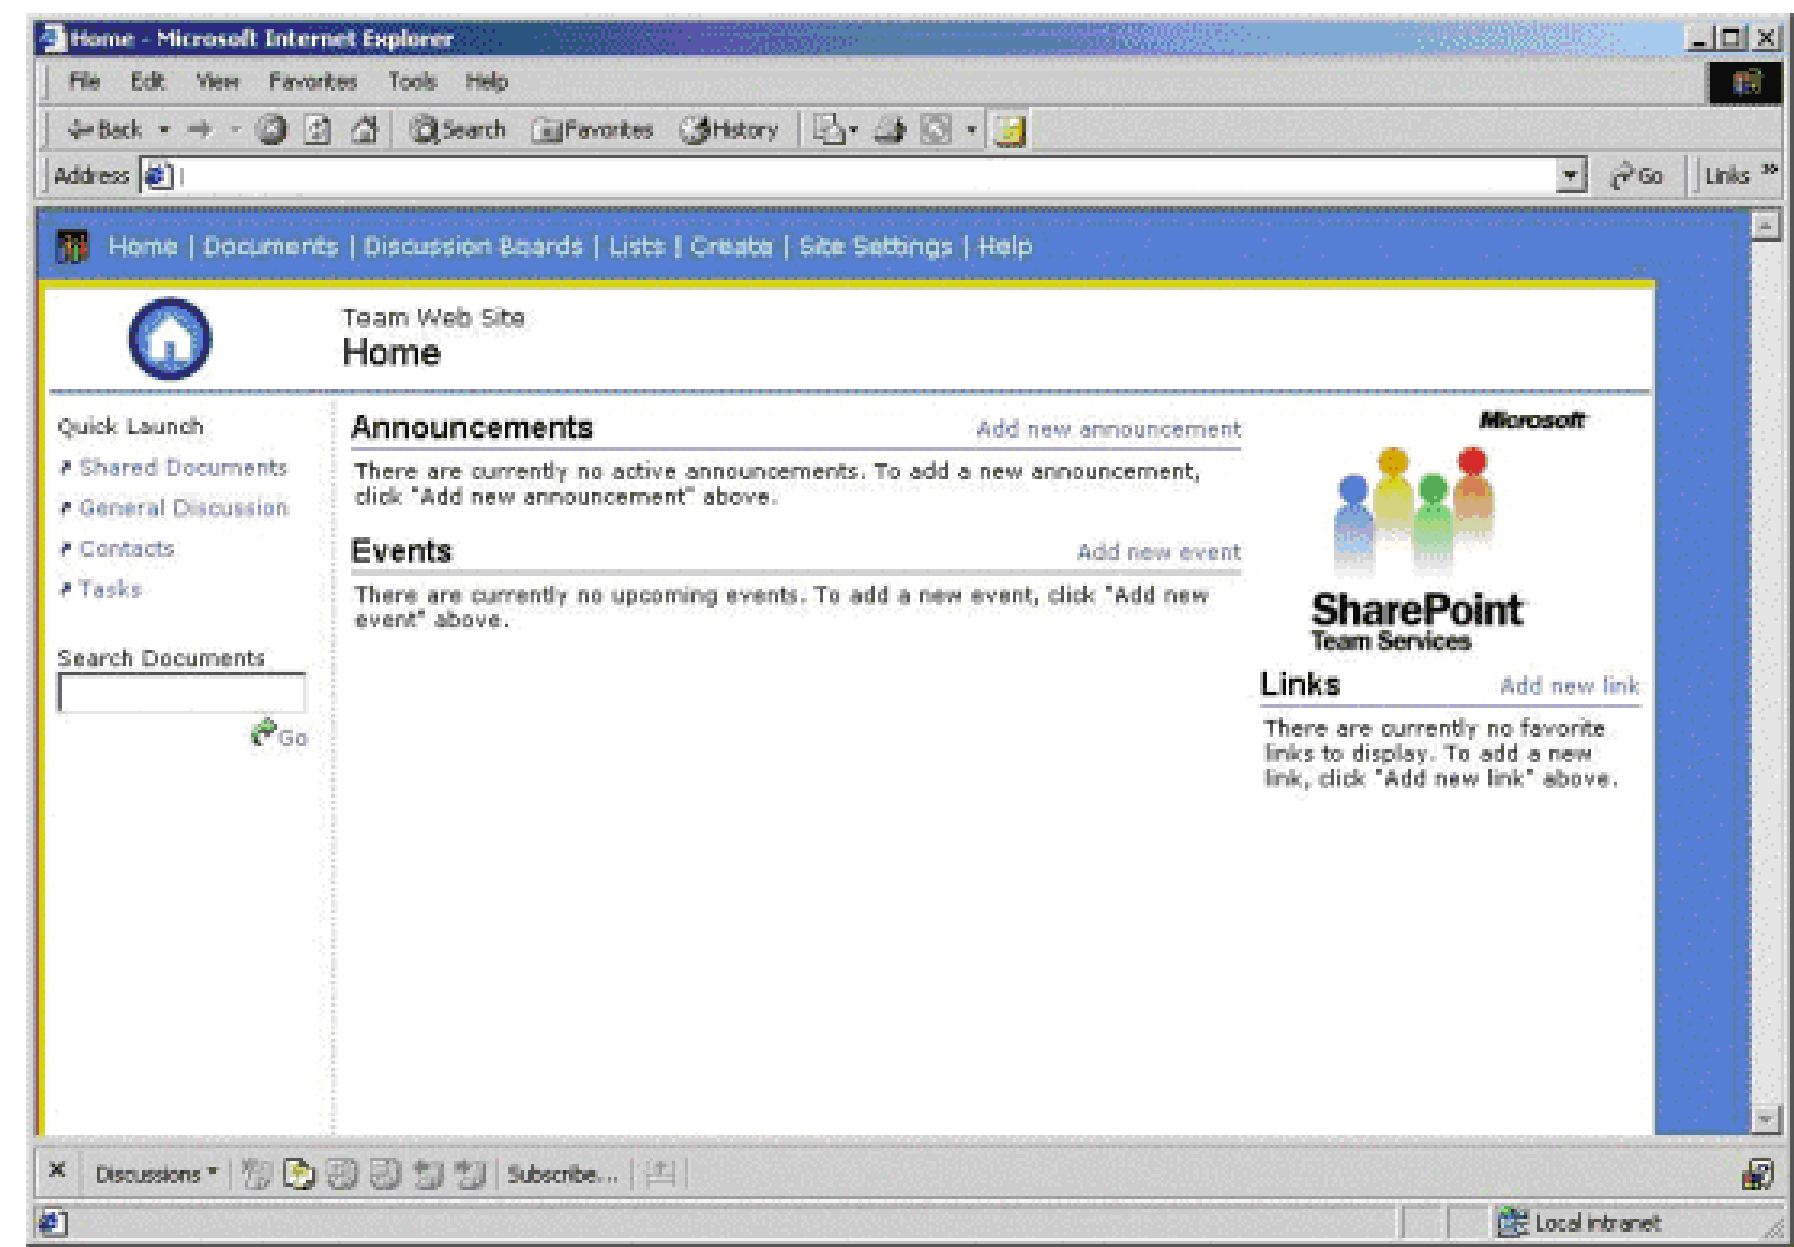

# SharePoint 2001

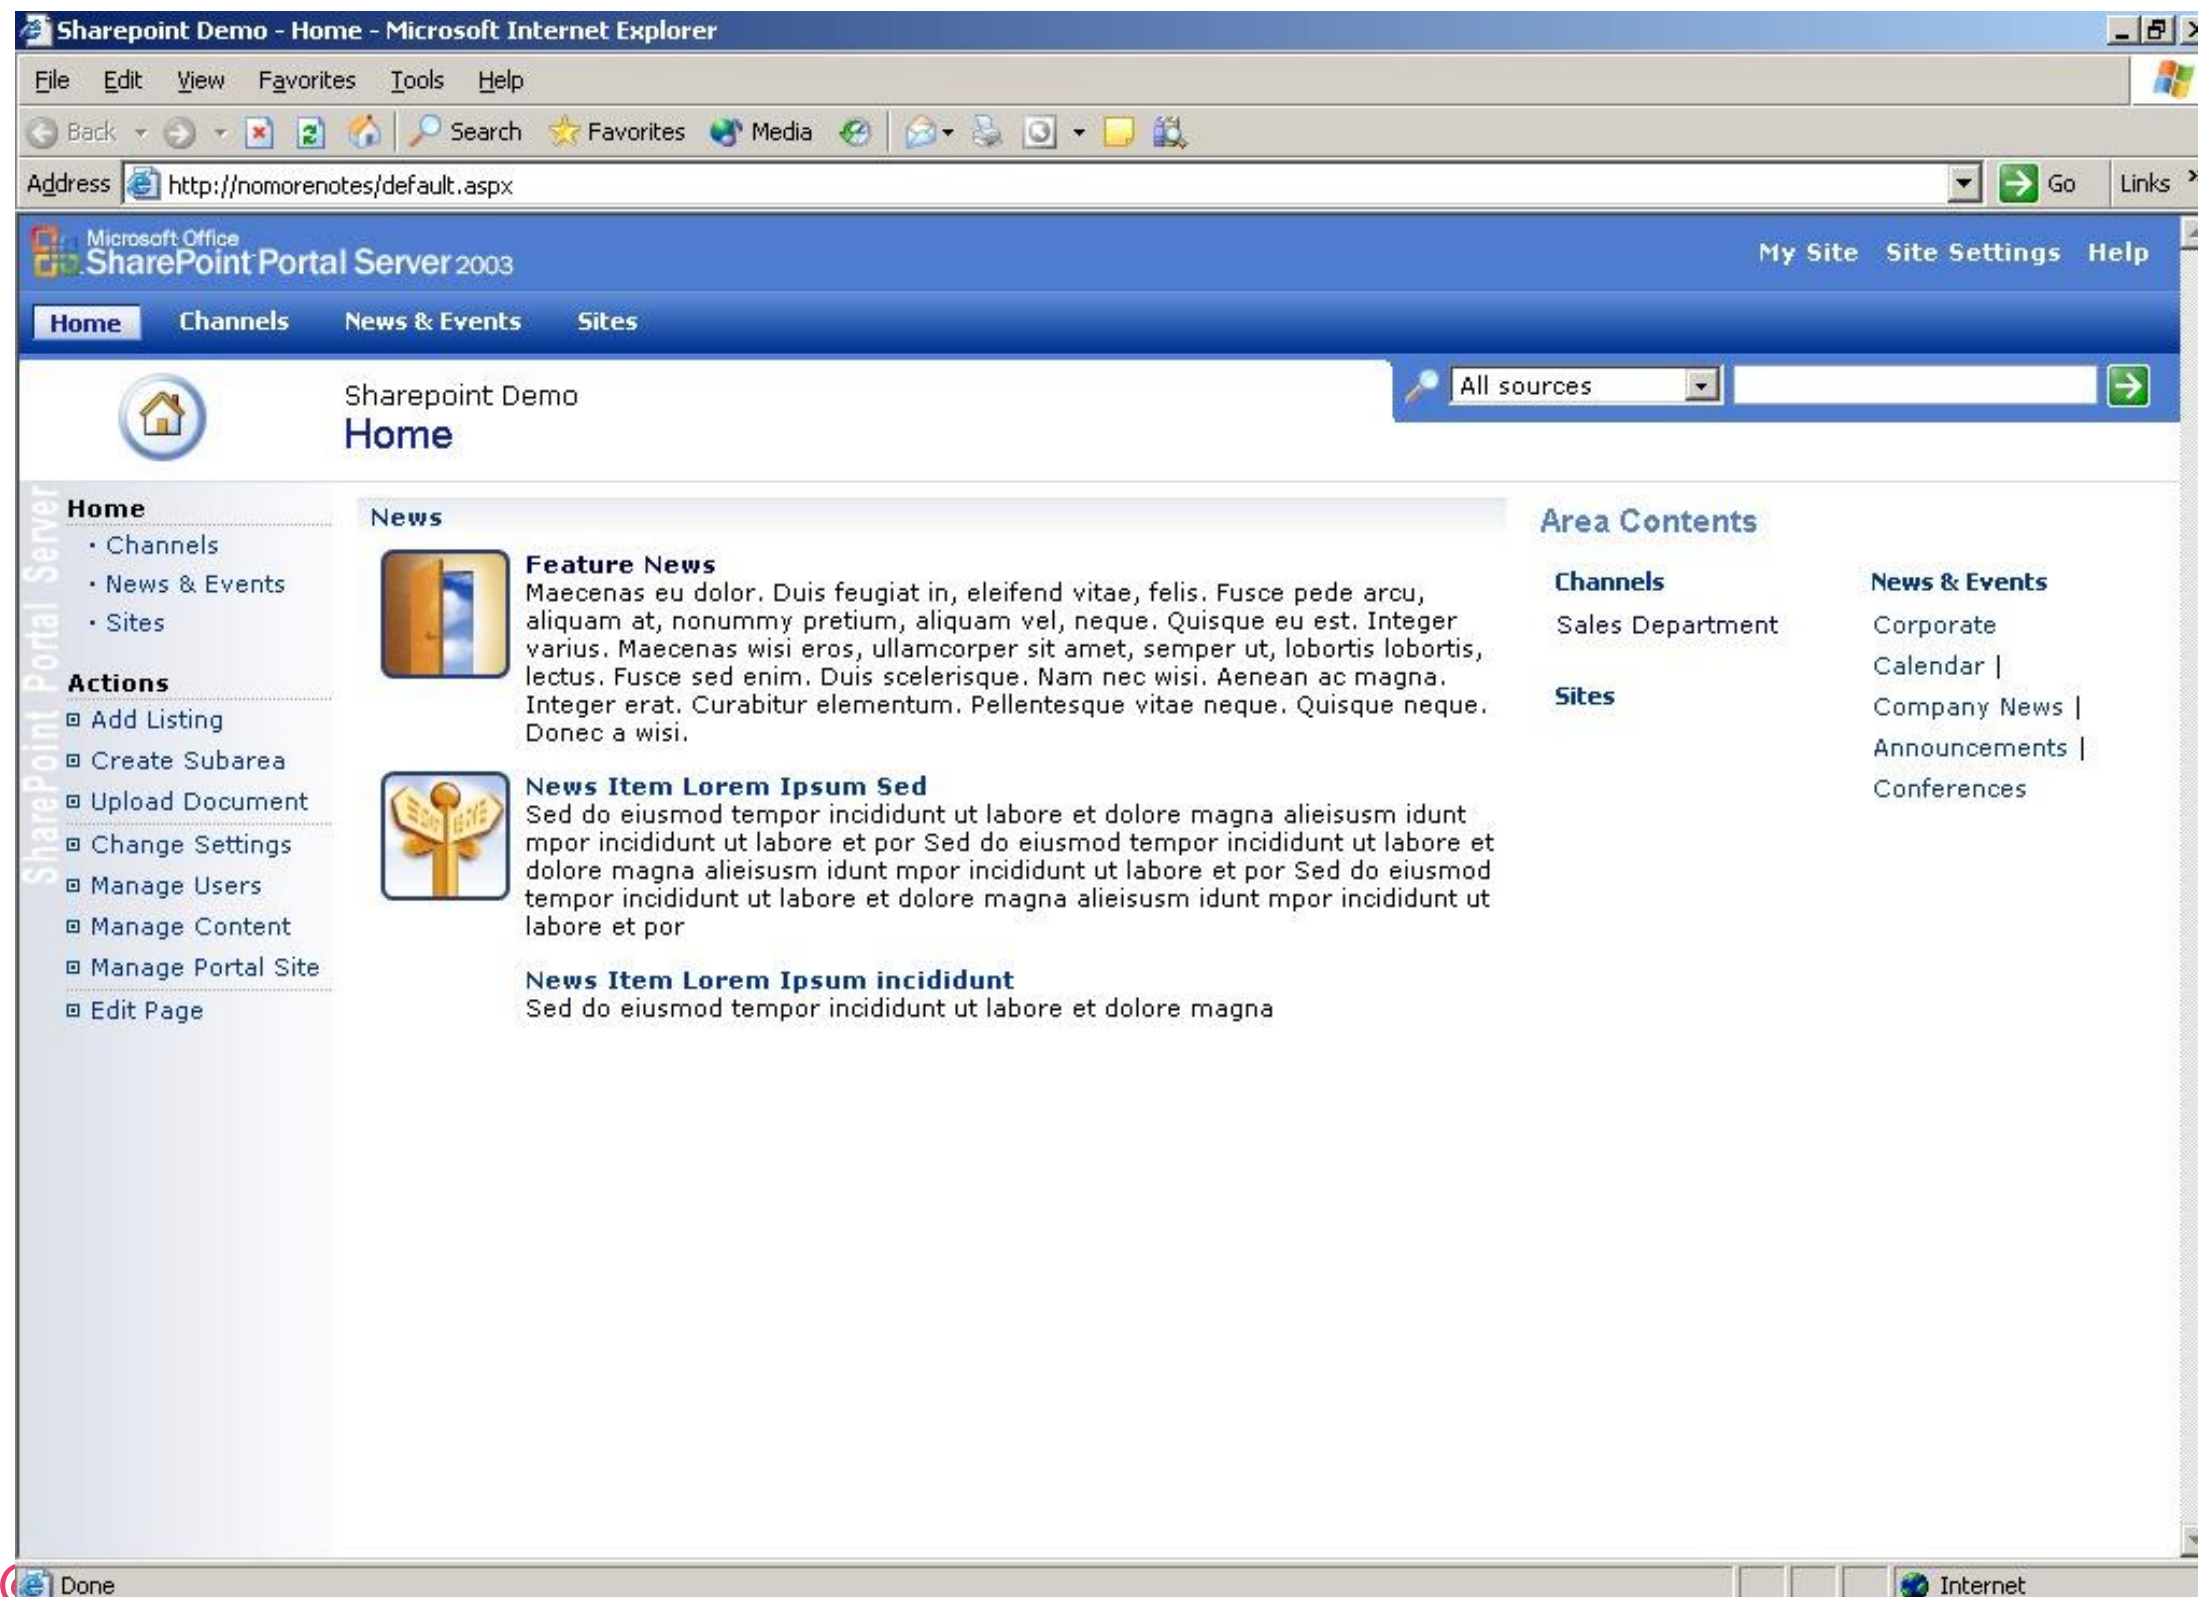

SharePoint Portal Server 2001

SharePoint Team Services (2002)

# SharePoint 2003

## Windows SharePoint Services 2.0 SharePoint Portal Server 2003

*STS is now WSS*

*Introduction of personal sites, profiles, etc*

*Content is now in a Database*

*ASP.NET is now the backbone*

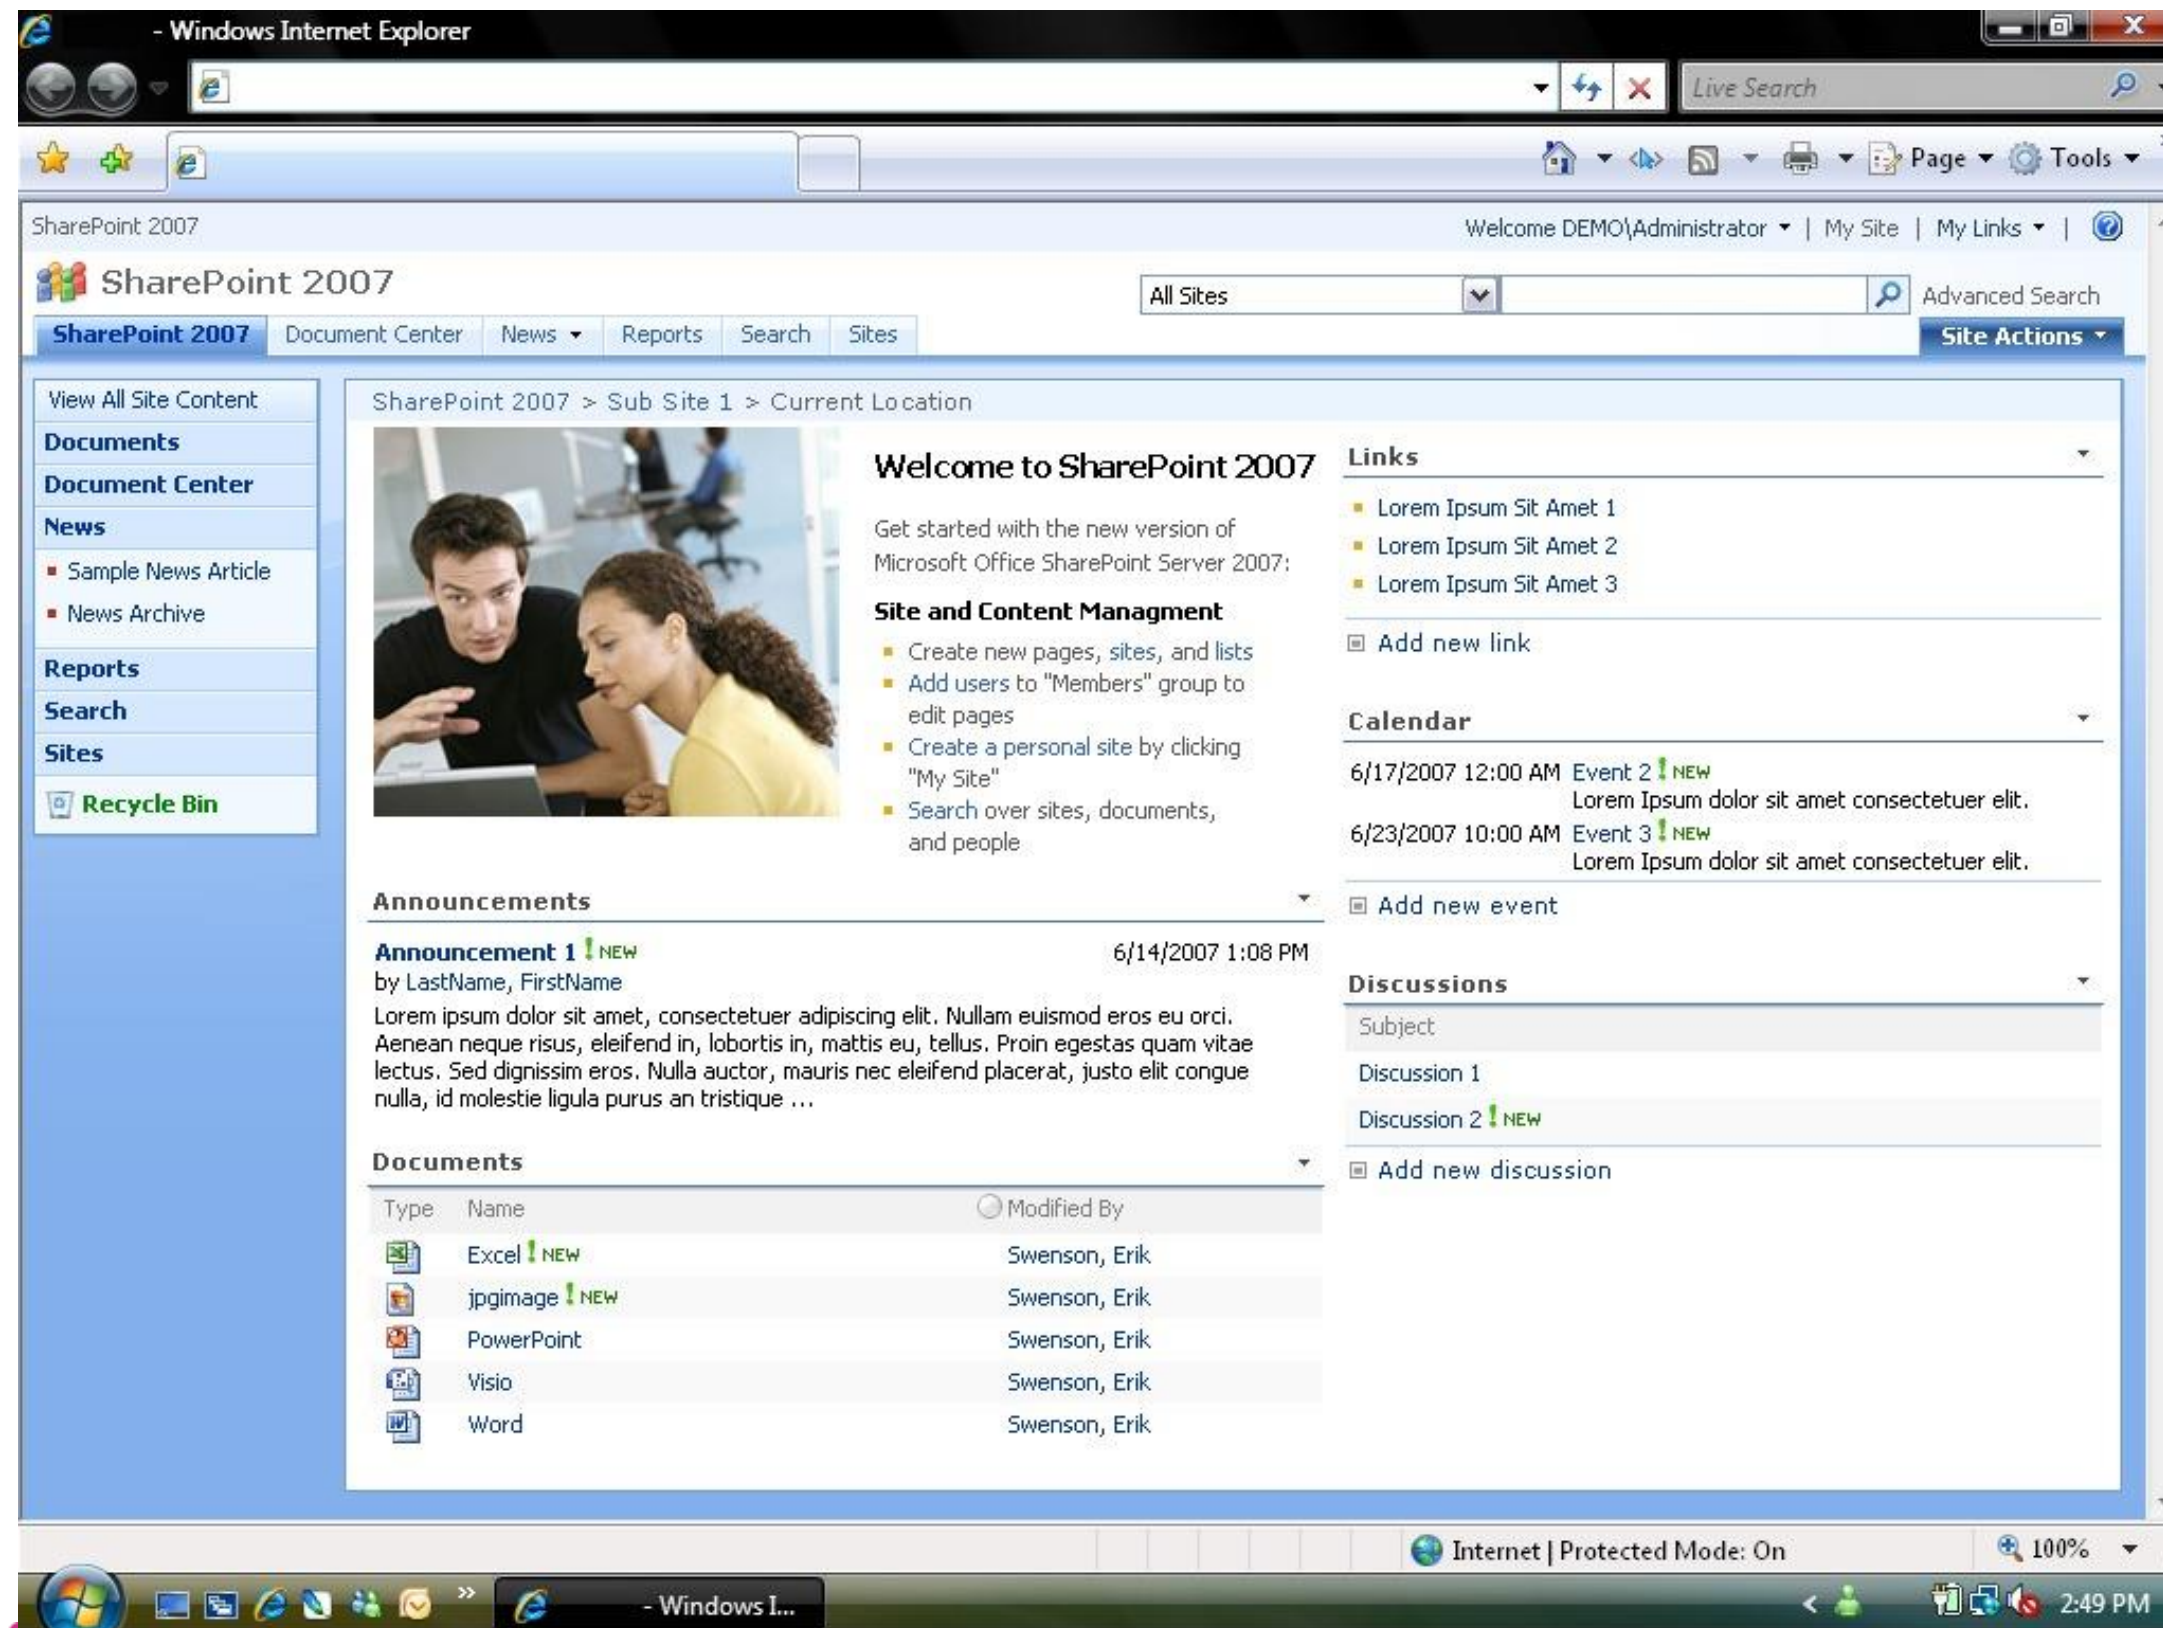

Done

Internet

 @jayleask

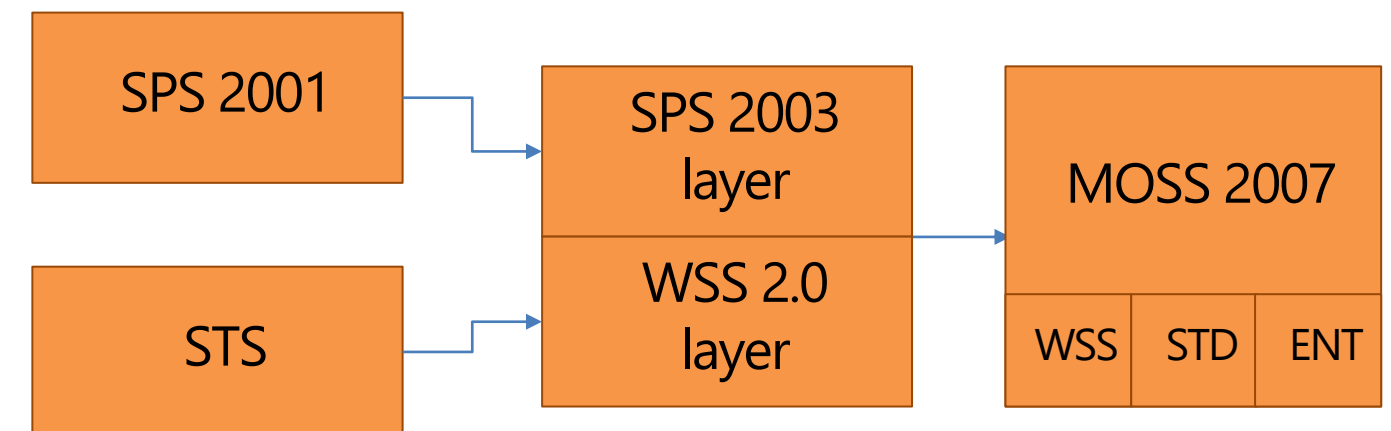

# SharePoint 2007

Windows SharePoint Services 3.0  
Office SharePoint Server 2007  
Office SharePoint Enterprise 2007

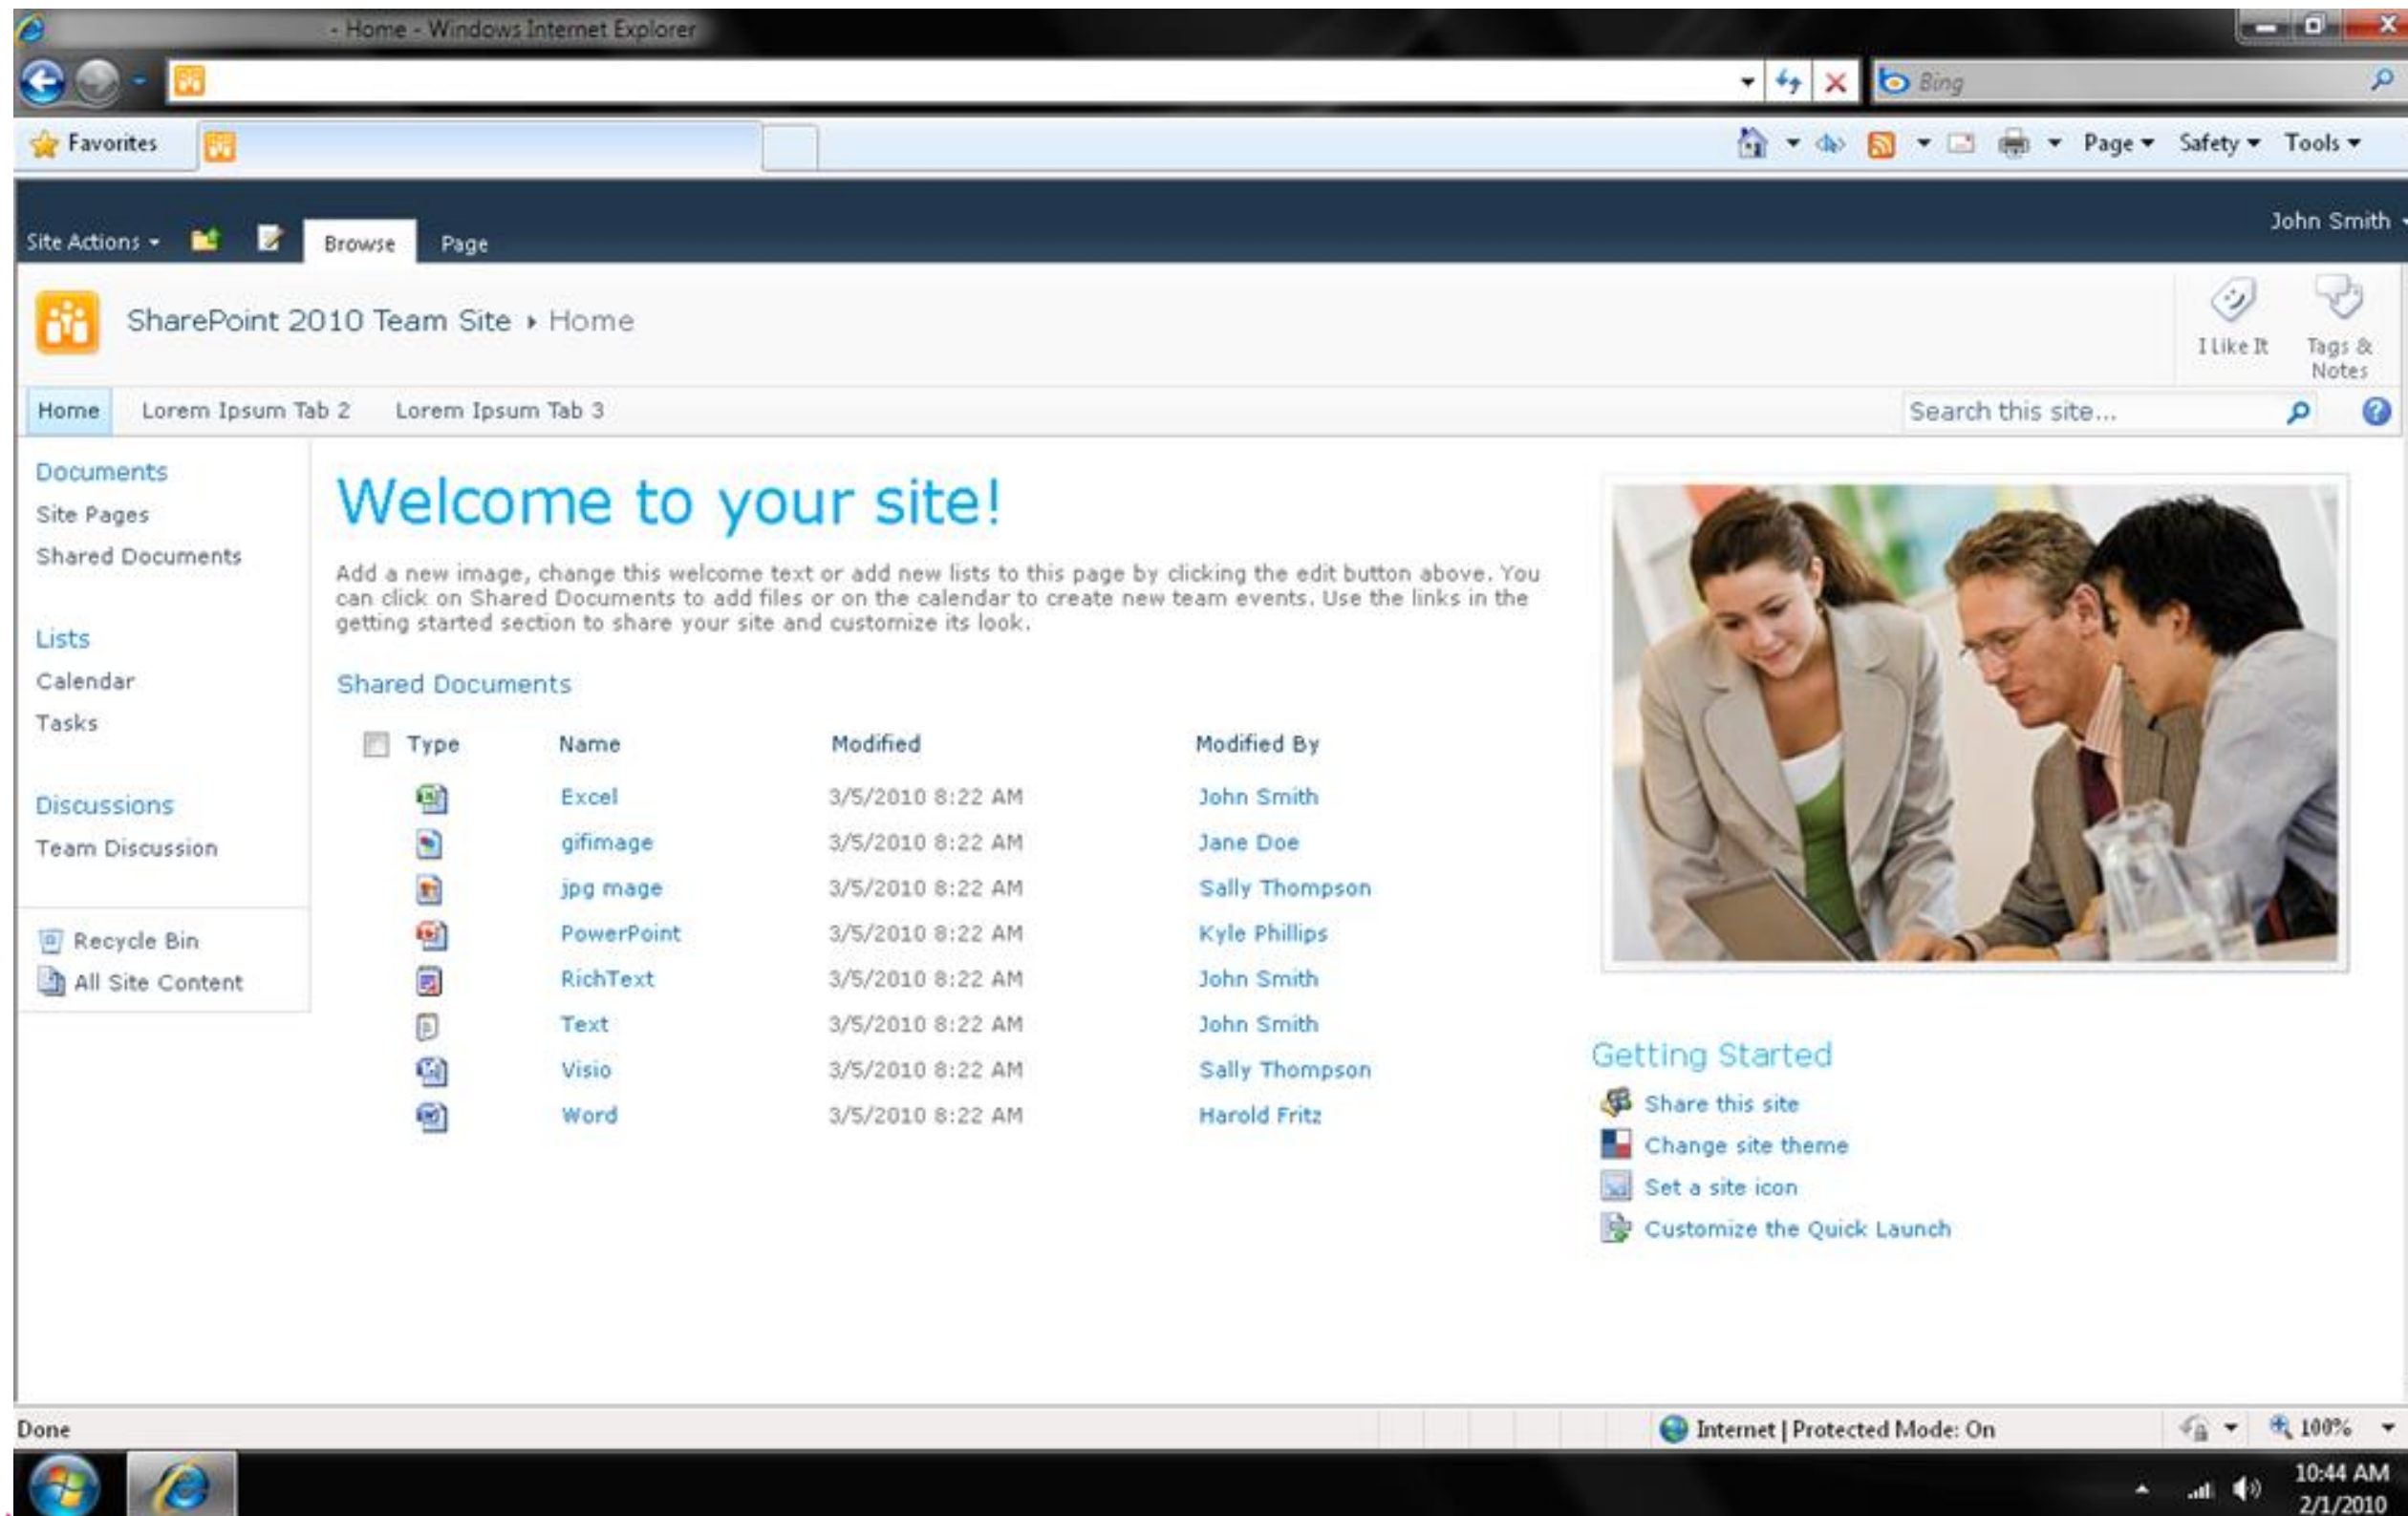

*Introduction of Shared Services Provider (SSP)*

- *Profiles and Audiences*
- *My Sites*
- *Search*
- *All of Excel Services*
- *All of the BDC (Business Data Catalog)*

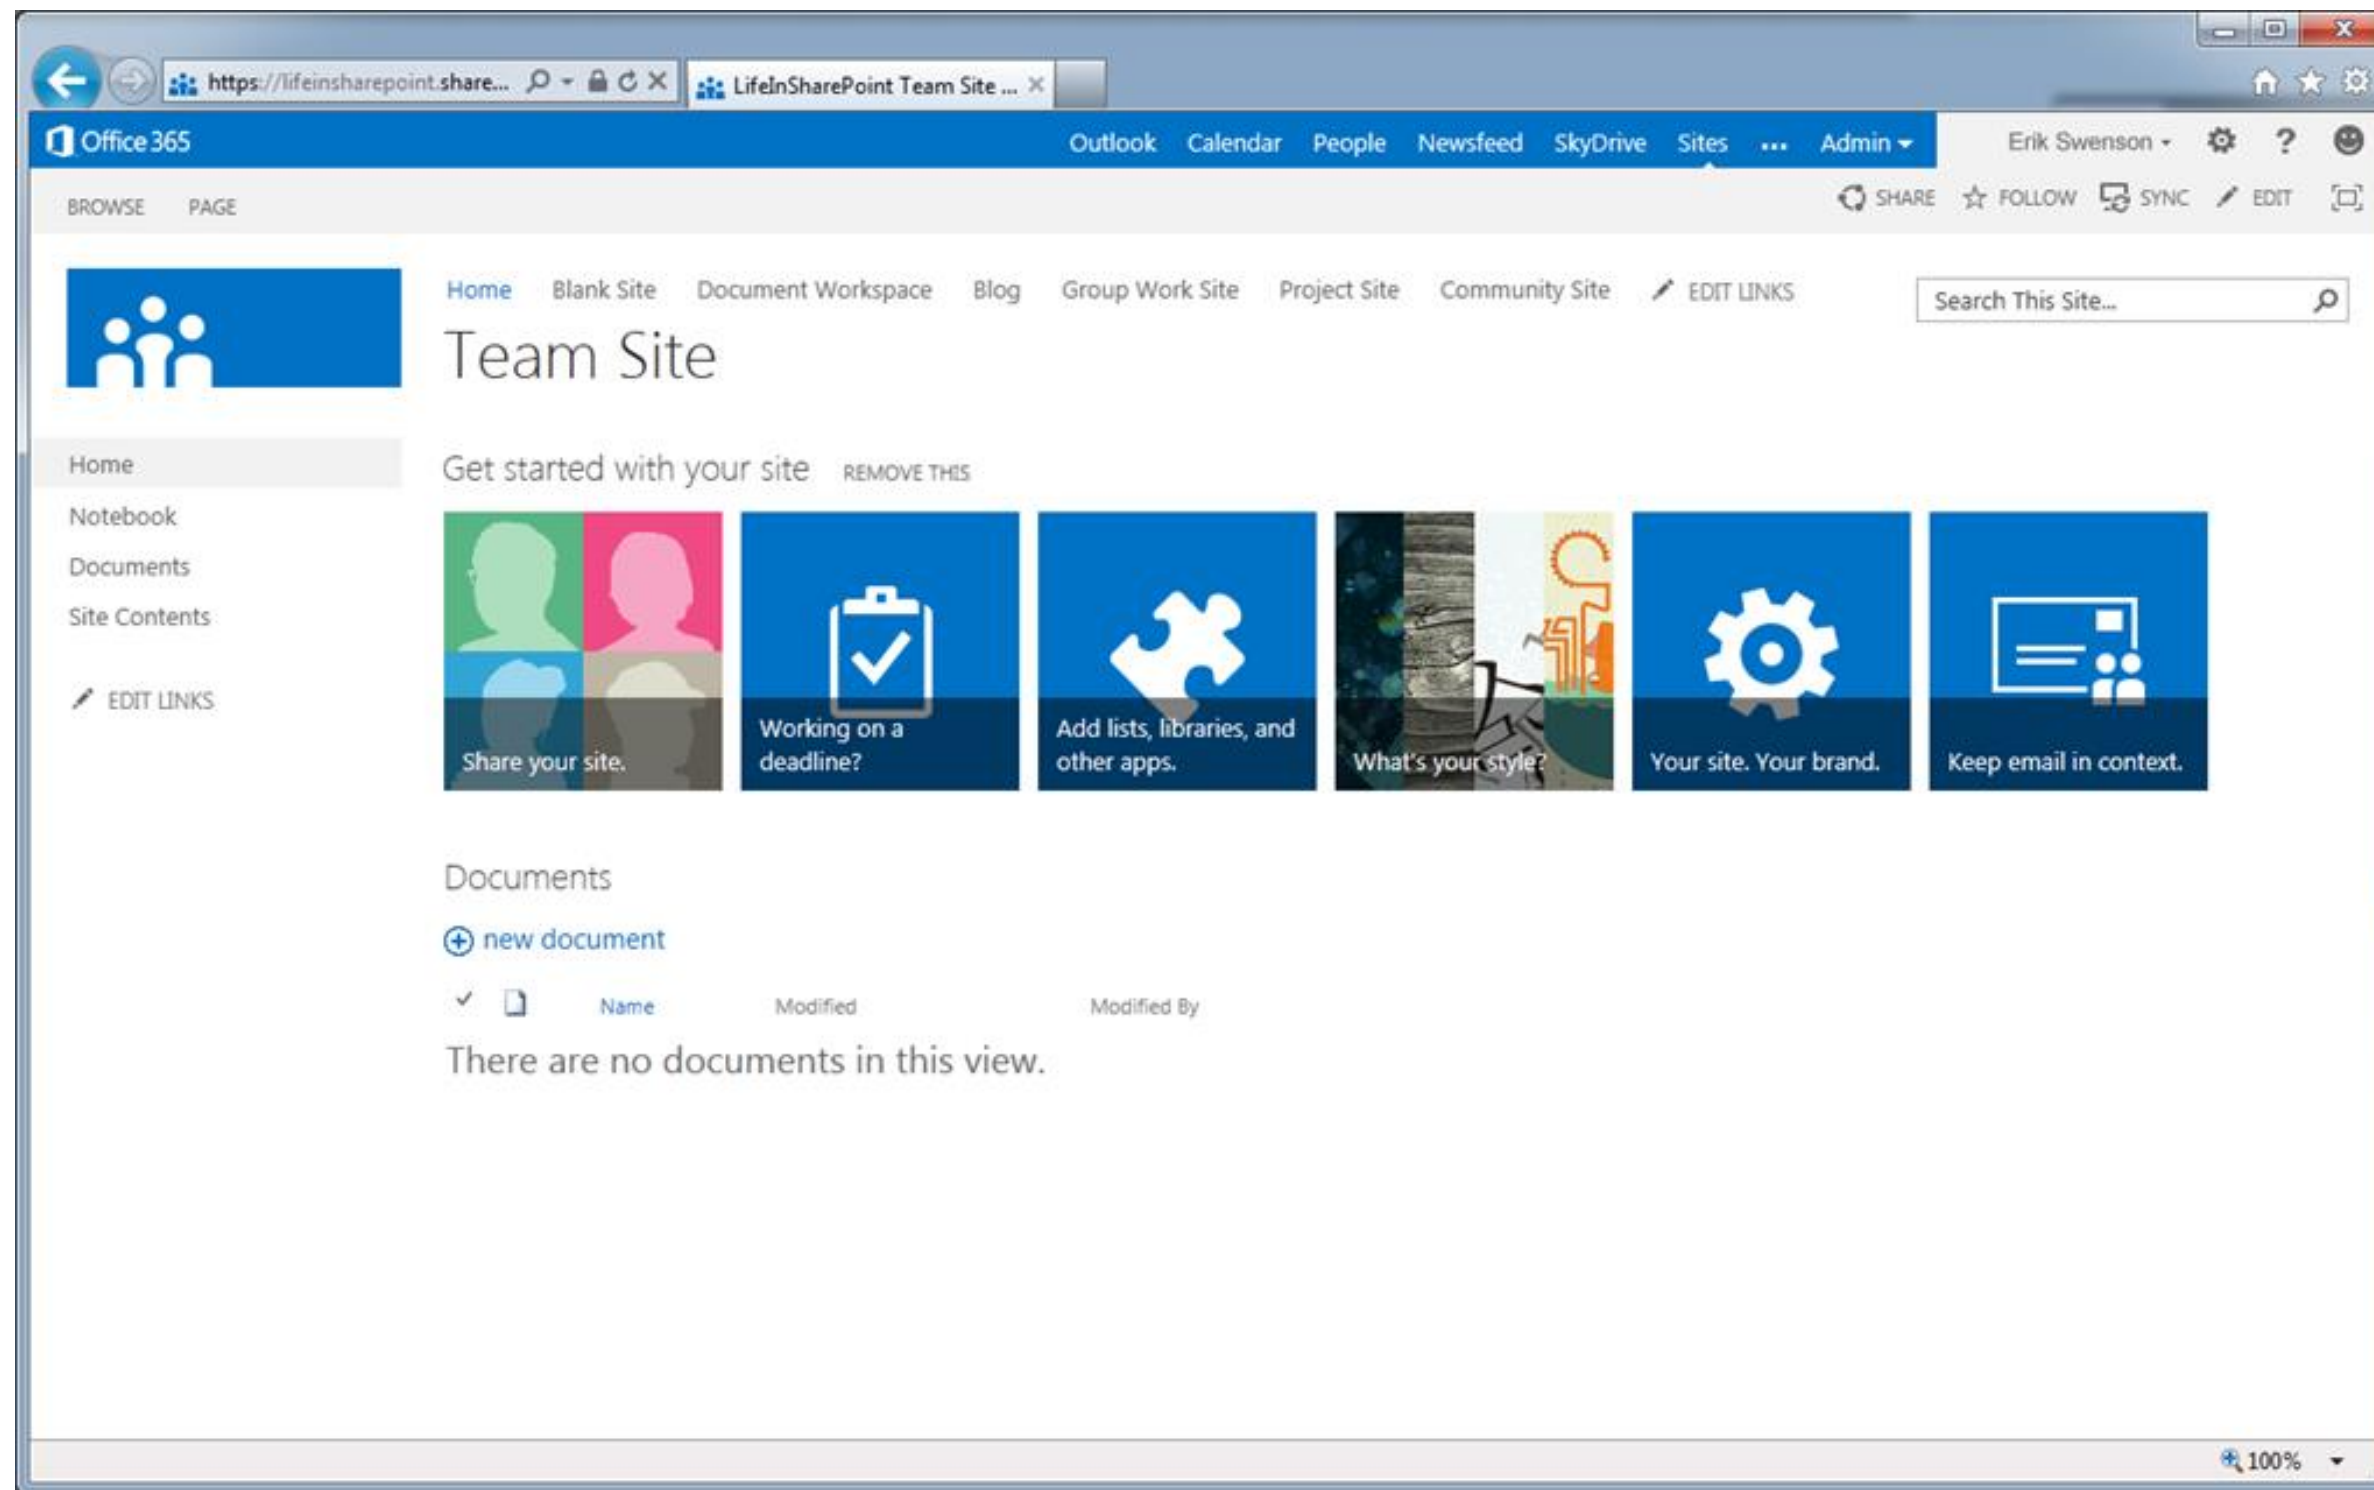

# SharePoint 2010

## SharePoint 2010 Foundation SharePoint 2010 Server

*Multi-tenant ready*  
*SSP now "Service Applications"*  
*Introduction of the "Ribbon"*  
*Social Features*  
*Sandbox Solutions*  
*PowerShell Support*  
*+optional FAST search*

# SharePoint 2013

**SharePoint 2013 Foundation**  
**SharePoint 2013 Server**  
**SharePoint 2013 Enterprise**

*FAST now the native Search*

*Cutting back site templates: no more meeting workspace, document workspace, etc*

*Foundation Search replaced by Server Search*

*New workflow engine*

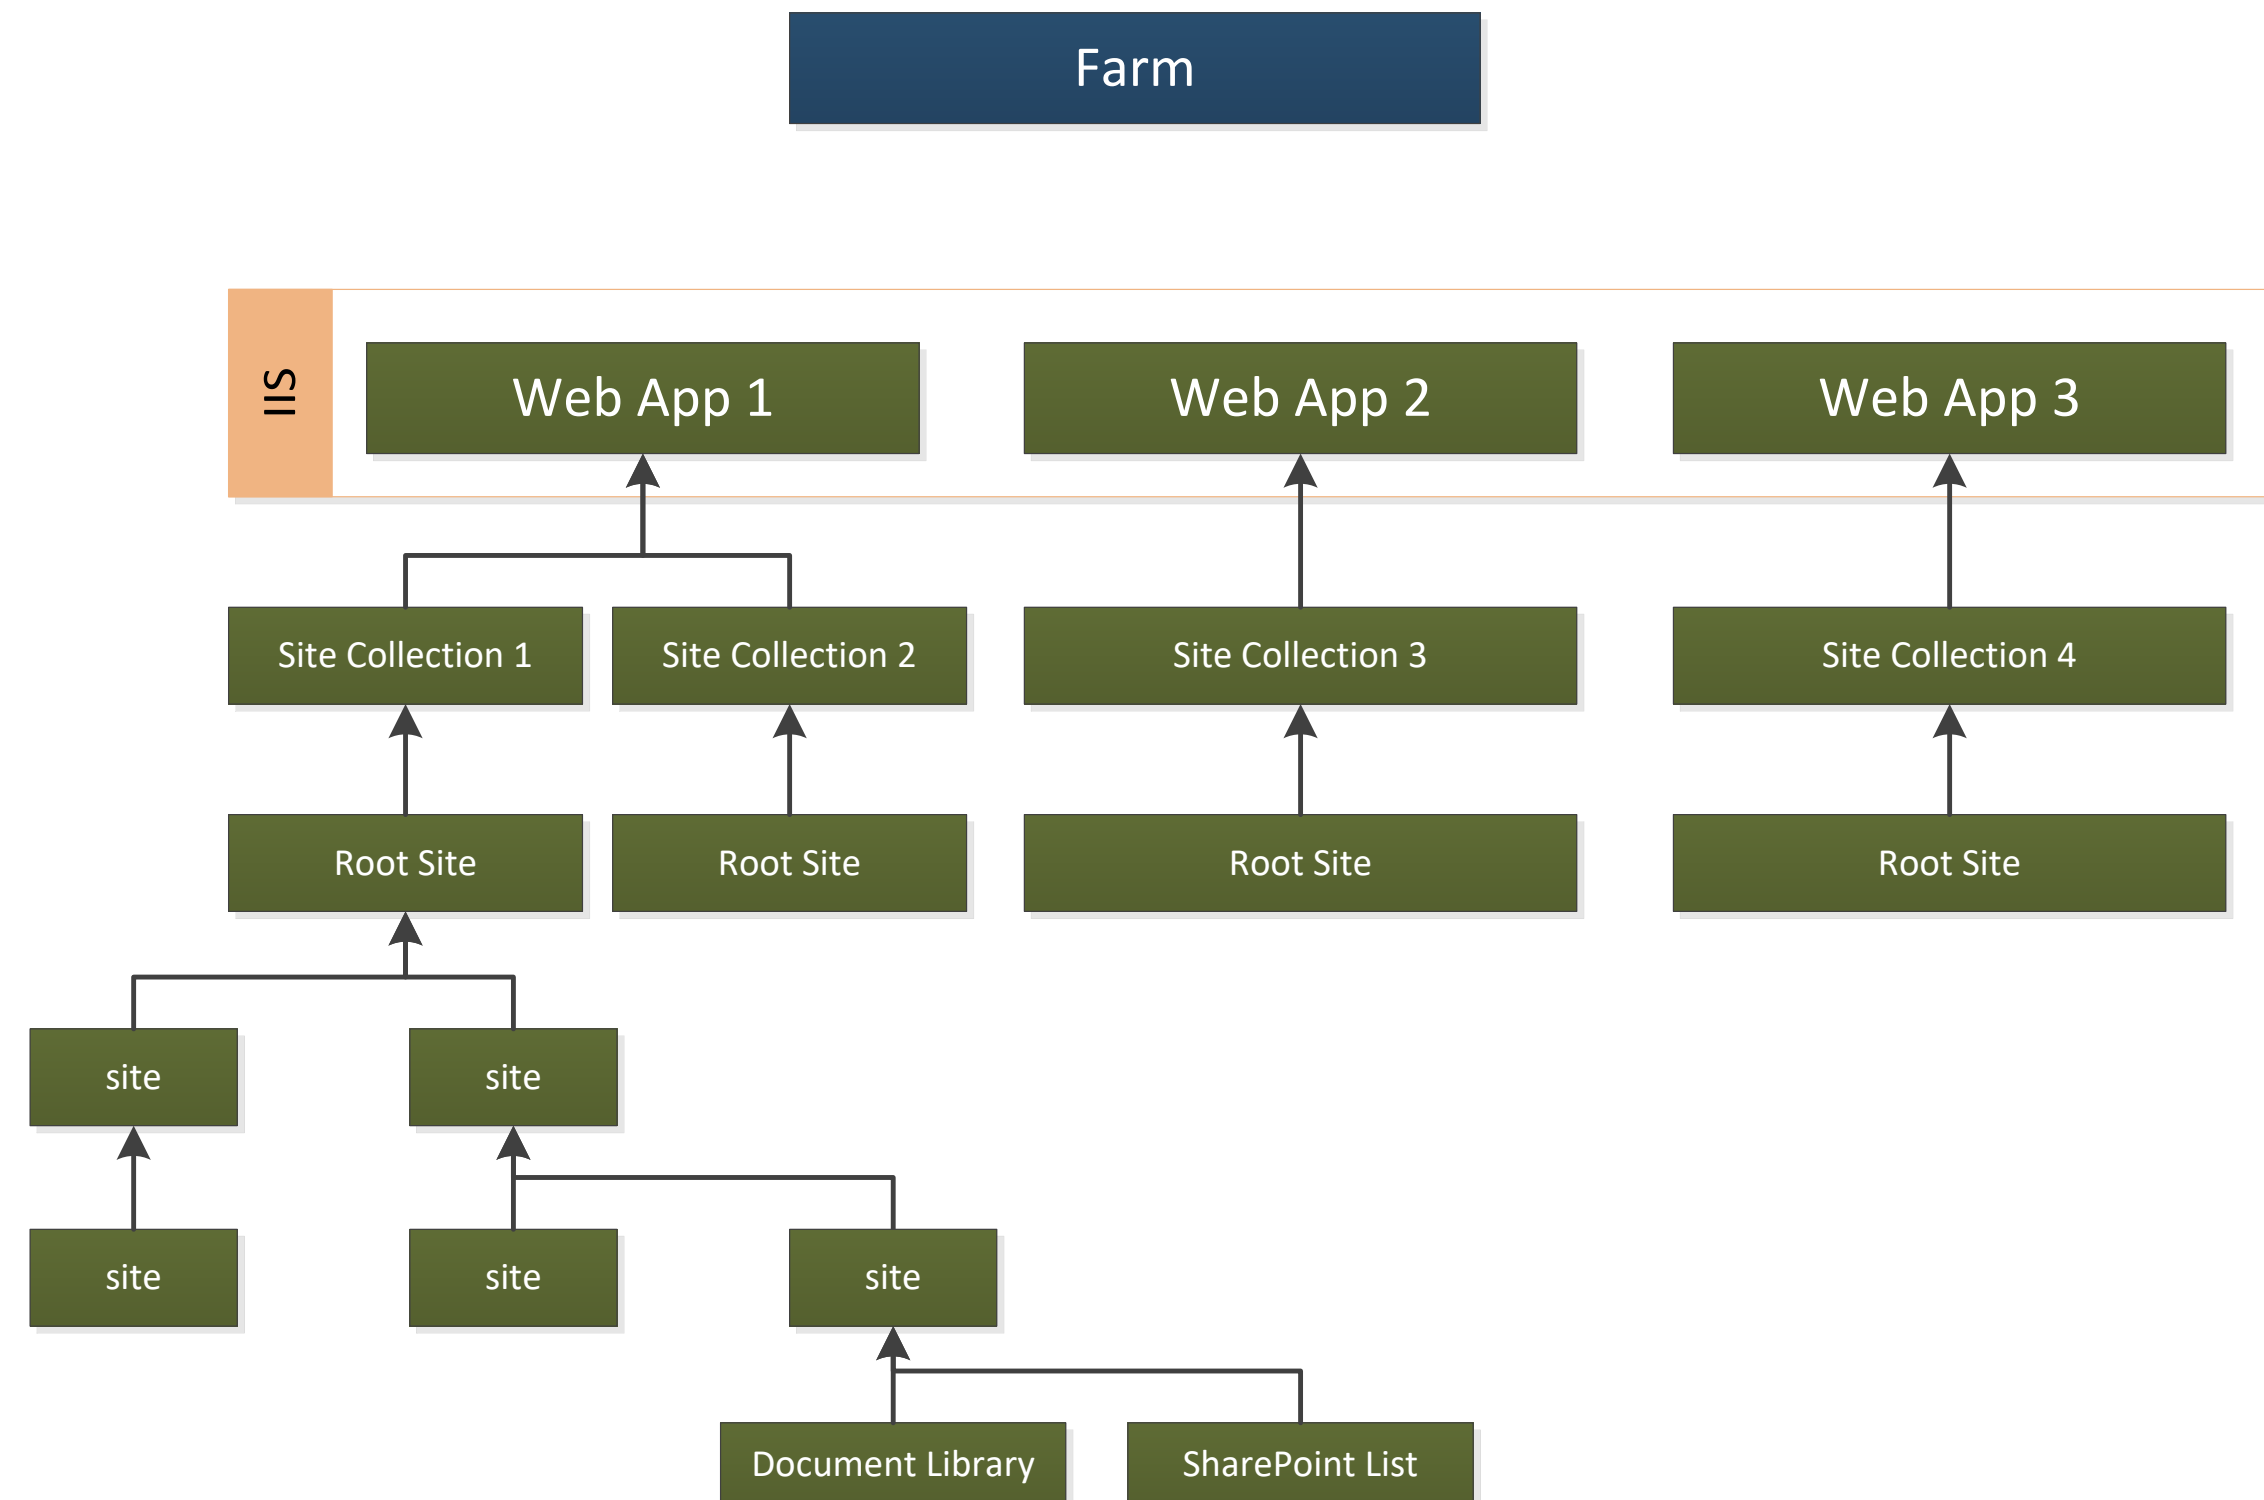

*Introduction of Distributed Cache*

# Common IA ... SP2013 and Earlier

## LARGEST to SMALLEST

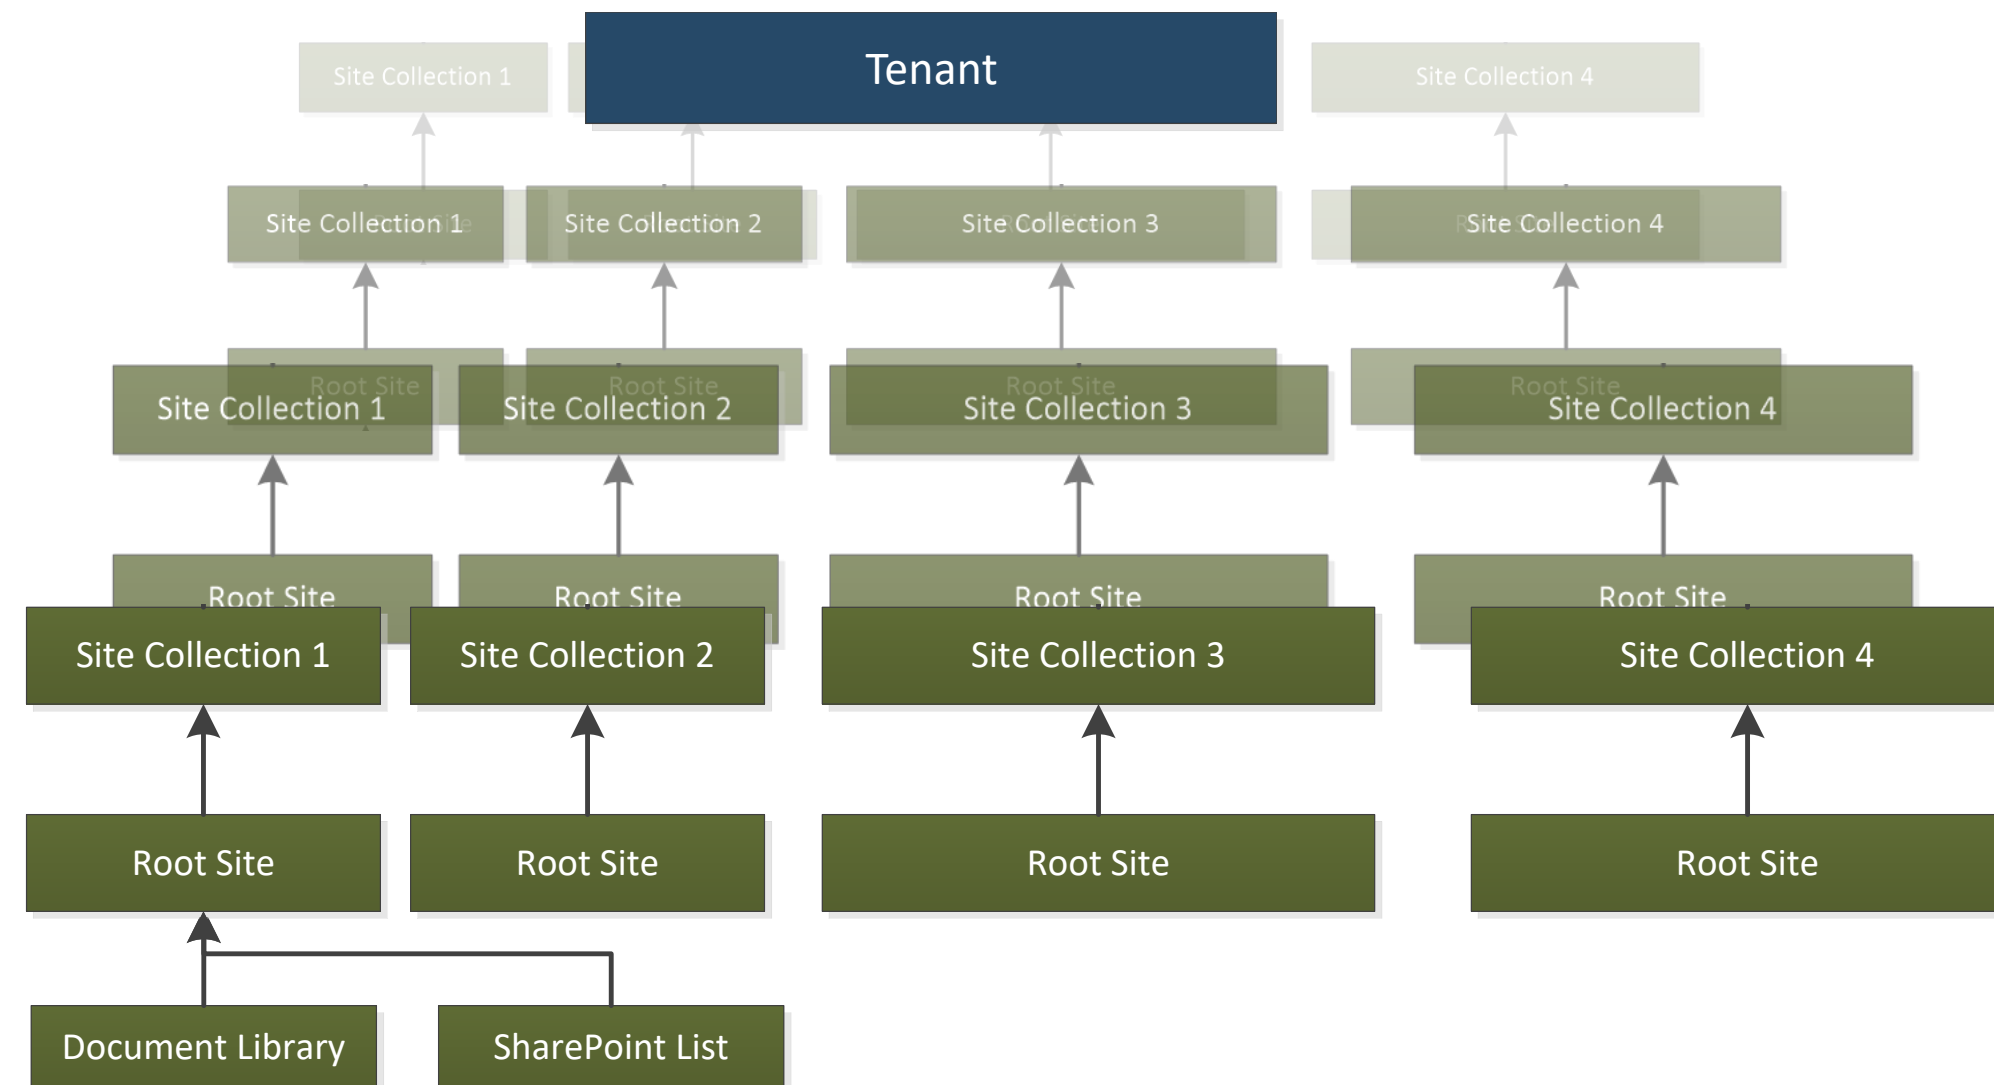

- Farm
- Web Application
- Site Collection
- Site
- List (Library)
- Item (Document)

# What about the Cloud?

## LARGEST to SMALLEST

- Tenant
- Site Collection
- Site (not for modern)
- List (Library)
- Item (Document)

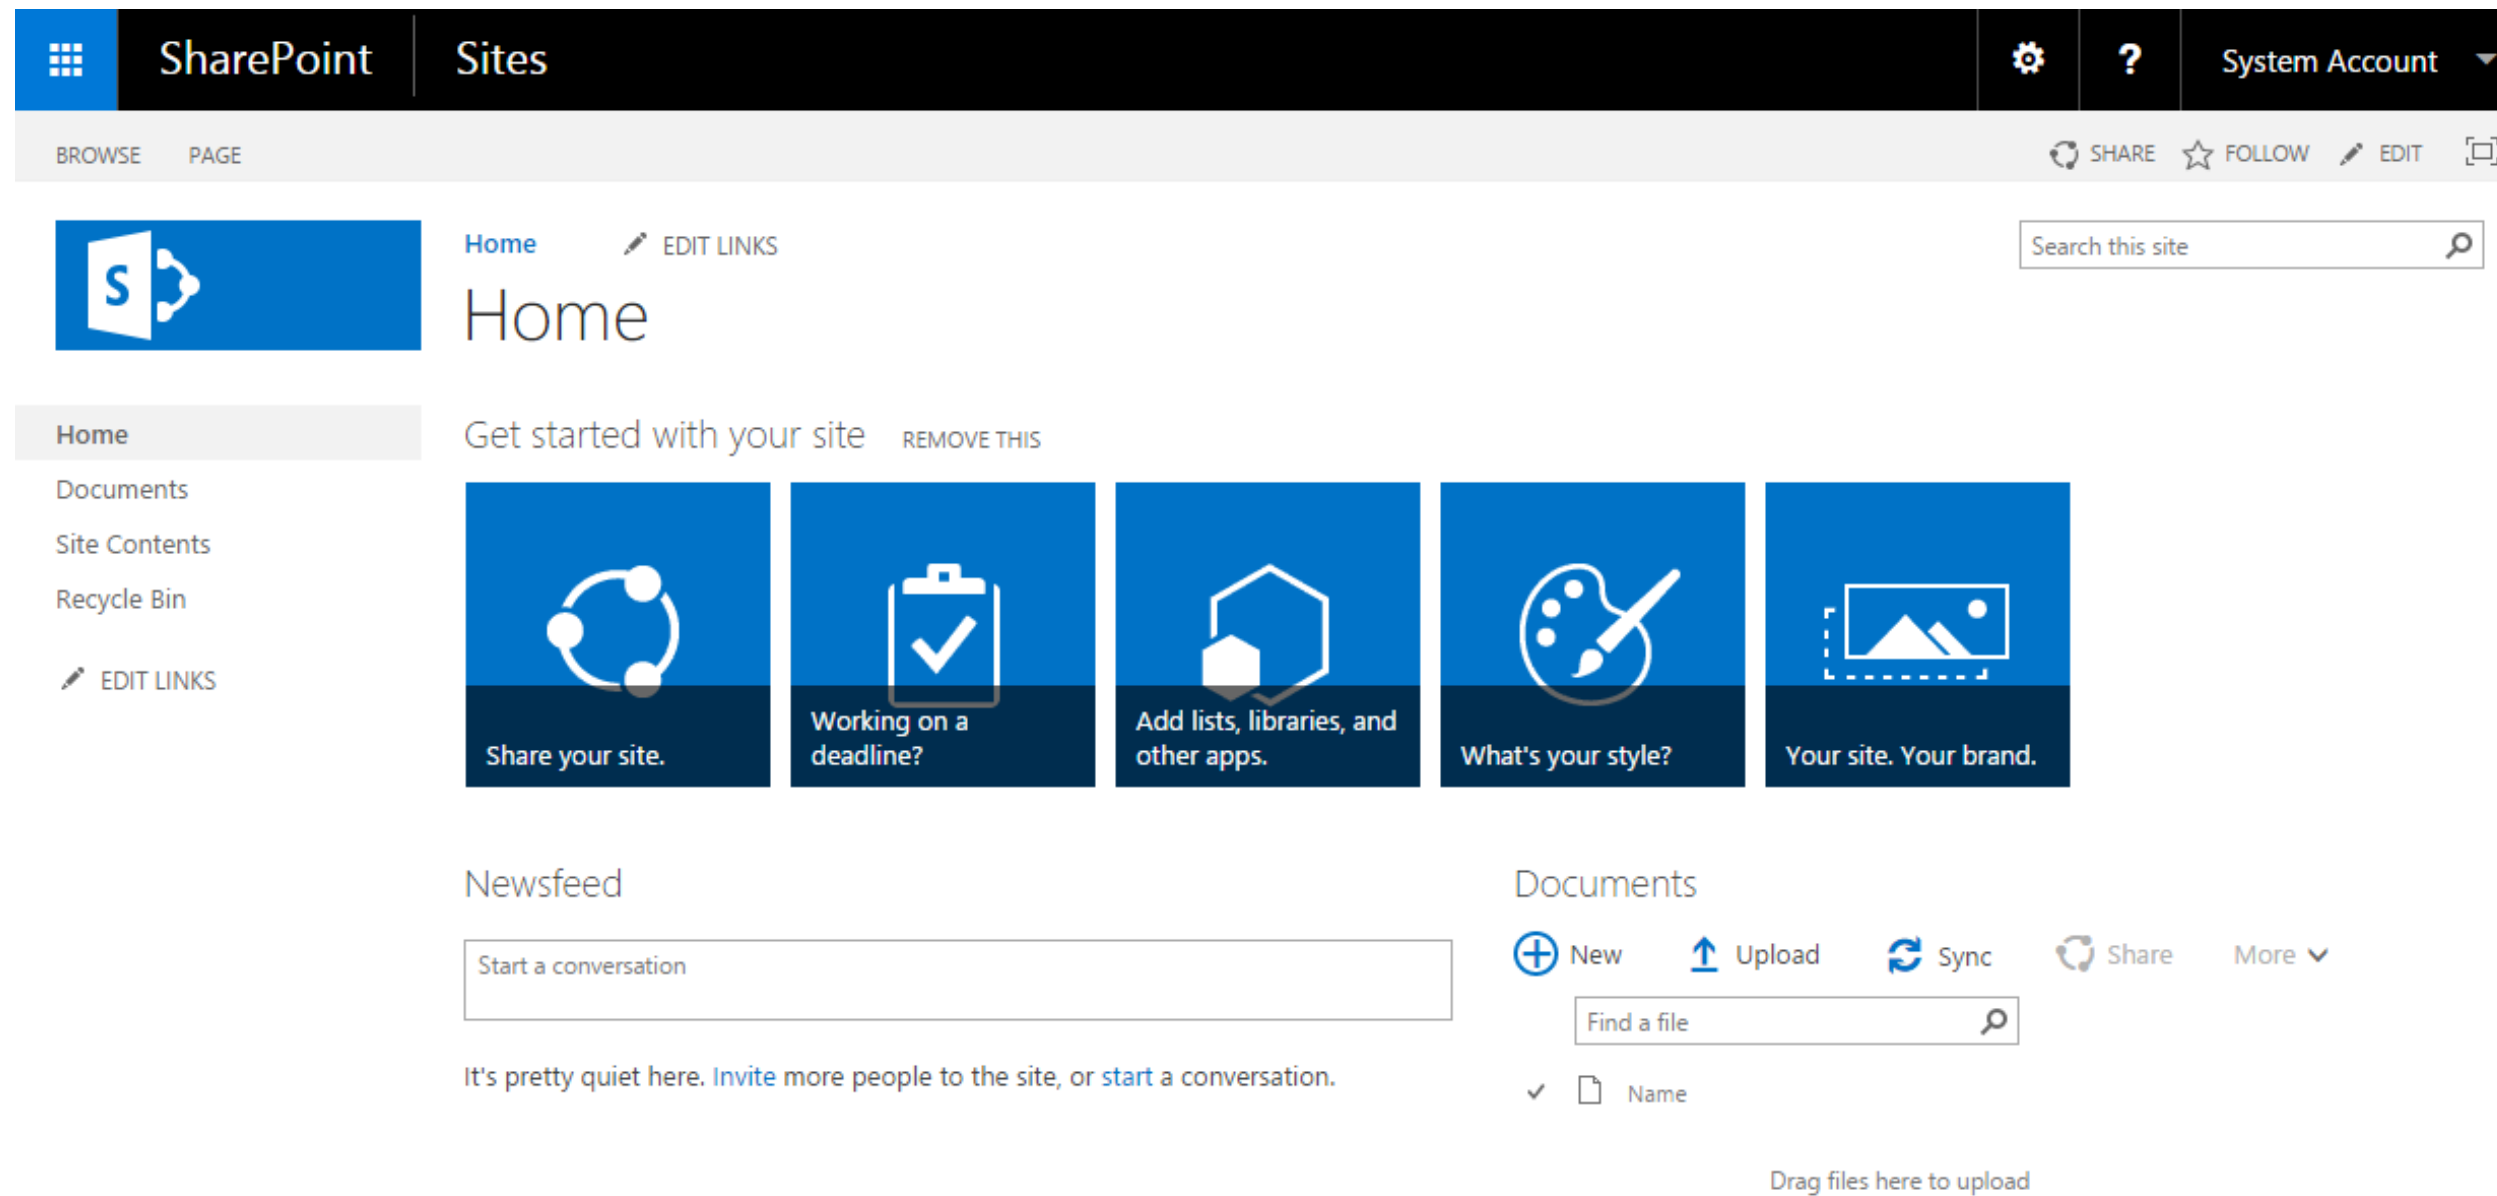

# Why nested Sites Cause Problems Today

---

Microsoft 365 and Power  
Platform India User Group

# SharePoint 2016

## SharePoint 2016 Server SharePoint 2016 Enterprise

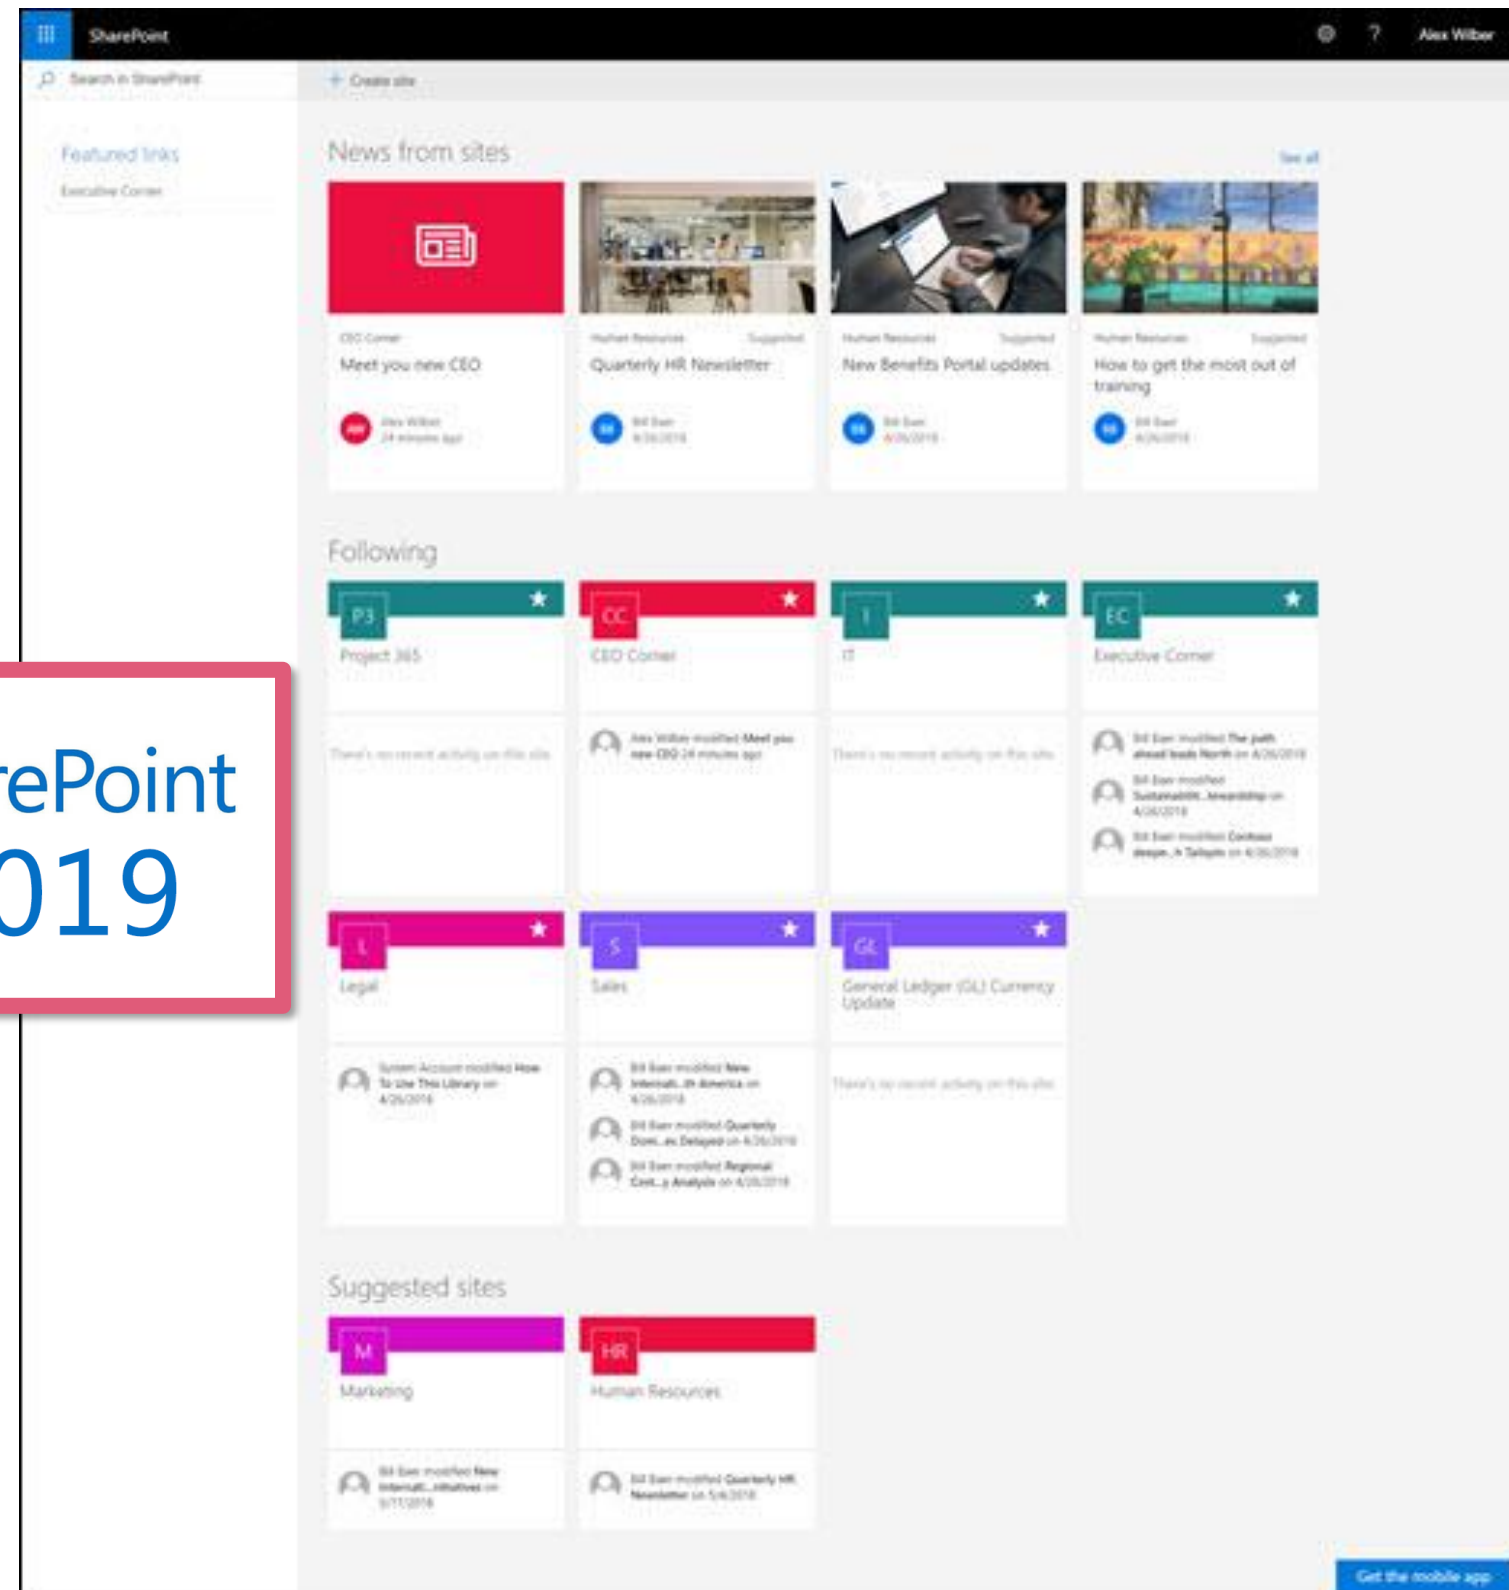

*No more Foundation - use Online!*  
*No more Designer – use the Browser!*  
*Introduction of App Launcher*  
*Hybrid*

# SharePoint 2019

 **SharePoint  
2019**

**Power Automate**  
**Search**

**Increased Modern Experience**

*SharePoint Start Page*

*Lists and Libraries*

*Team & Communication pages*

*Branding Support*

*Modern Search*

\*\*\* *MOBILE READY INTERFACE* \*\*\*

**Hubs**

*Cross-site Navigation*

*Content Rollups*

*Scoped Search*

# • Control & Settings Issues

## Tenant Wide Settings

- Records Management
- Taxonomy
- Navigation
- Governance
- Lifecycle Management

## Controls by Site Collections

- Membership
- Sharing settings
- Expiration
- Naming Conventions

## Applications as Site Collections

- New SharePoint Site
- Communications Sites
- Group-connected Sites
- Teams-connected Sites
- Private Channels

## User Interface

- Hubs connect to Site Collections
- Content Rollups
- Modern Sites !! Sub-sites
- Organizational Change – go ahead, RESTRUCTURE!!

# An approach to Information Architecture

---

Microsoft 365 and Power  
Platform India User Group

# An approach to Information Architecture (+Governance)

---

Microsoft 365 and Power  
Platform India User Group

“ For some other enterprises, SharePoint has not been deployed widely, and there are often comments about owning SharePoint shelf ware.

In some cases, the *problems are not due to SharePoint shortcomings*, but rather the fault of the organization itself - *poorly planned deployments, weak efforts at engaging the business and inability to do the organizational change management needed to achieve success.*

While these are organizational shortcomings, SharePoint doesn't do much to alleviate these issues. Clients often report that broad business adoption has not been easy to achieve, and they struggle with training, governance, cost management and migration.

”

*Gartner, January 2013*

# Common IM Issues

*If standard Office 365 governance policies were applied to transport policies.*

Office 365 treated as a single application, instead of a collection of services

No ownership – business, and new releases

Inadequate Training

More than just technology

Inflexible

Where to voice concerns?

Lack of best practice in customizations

Business benefit

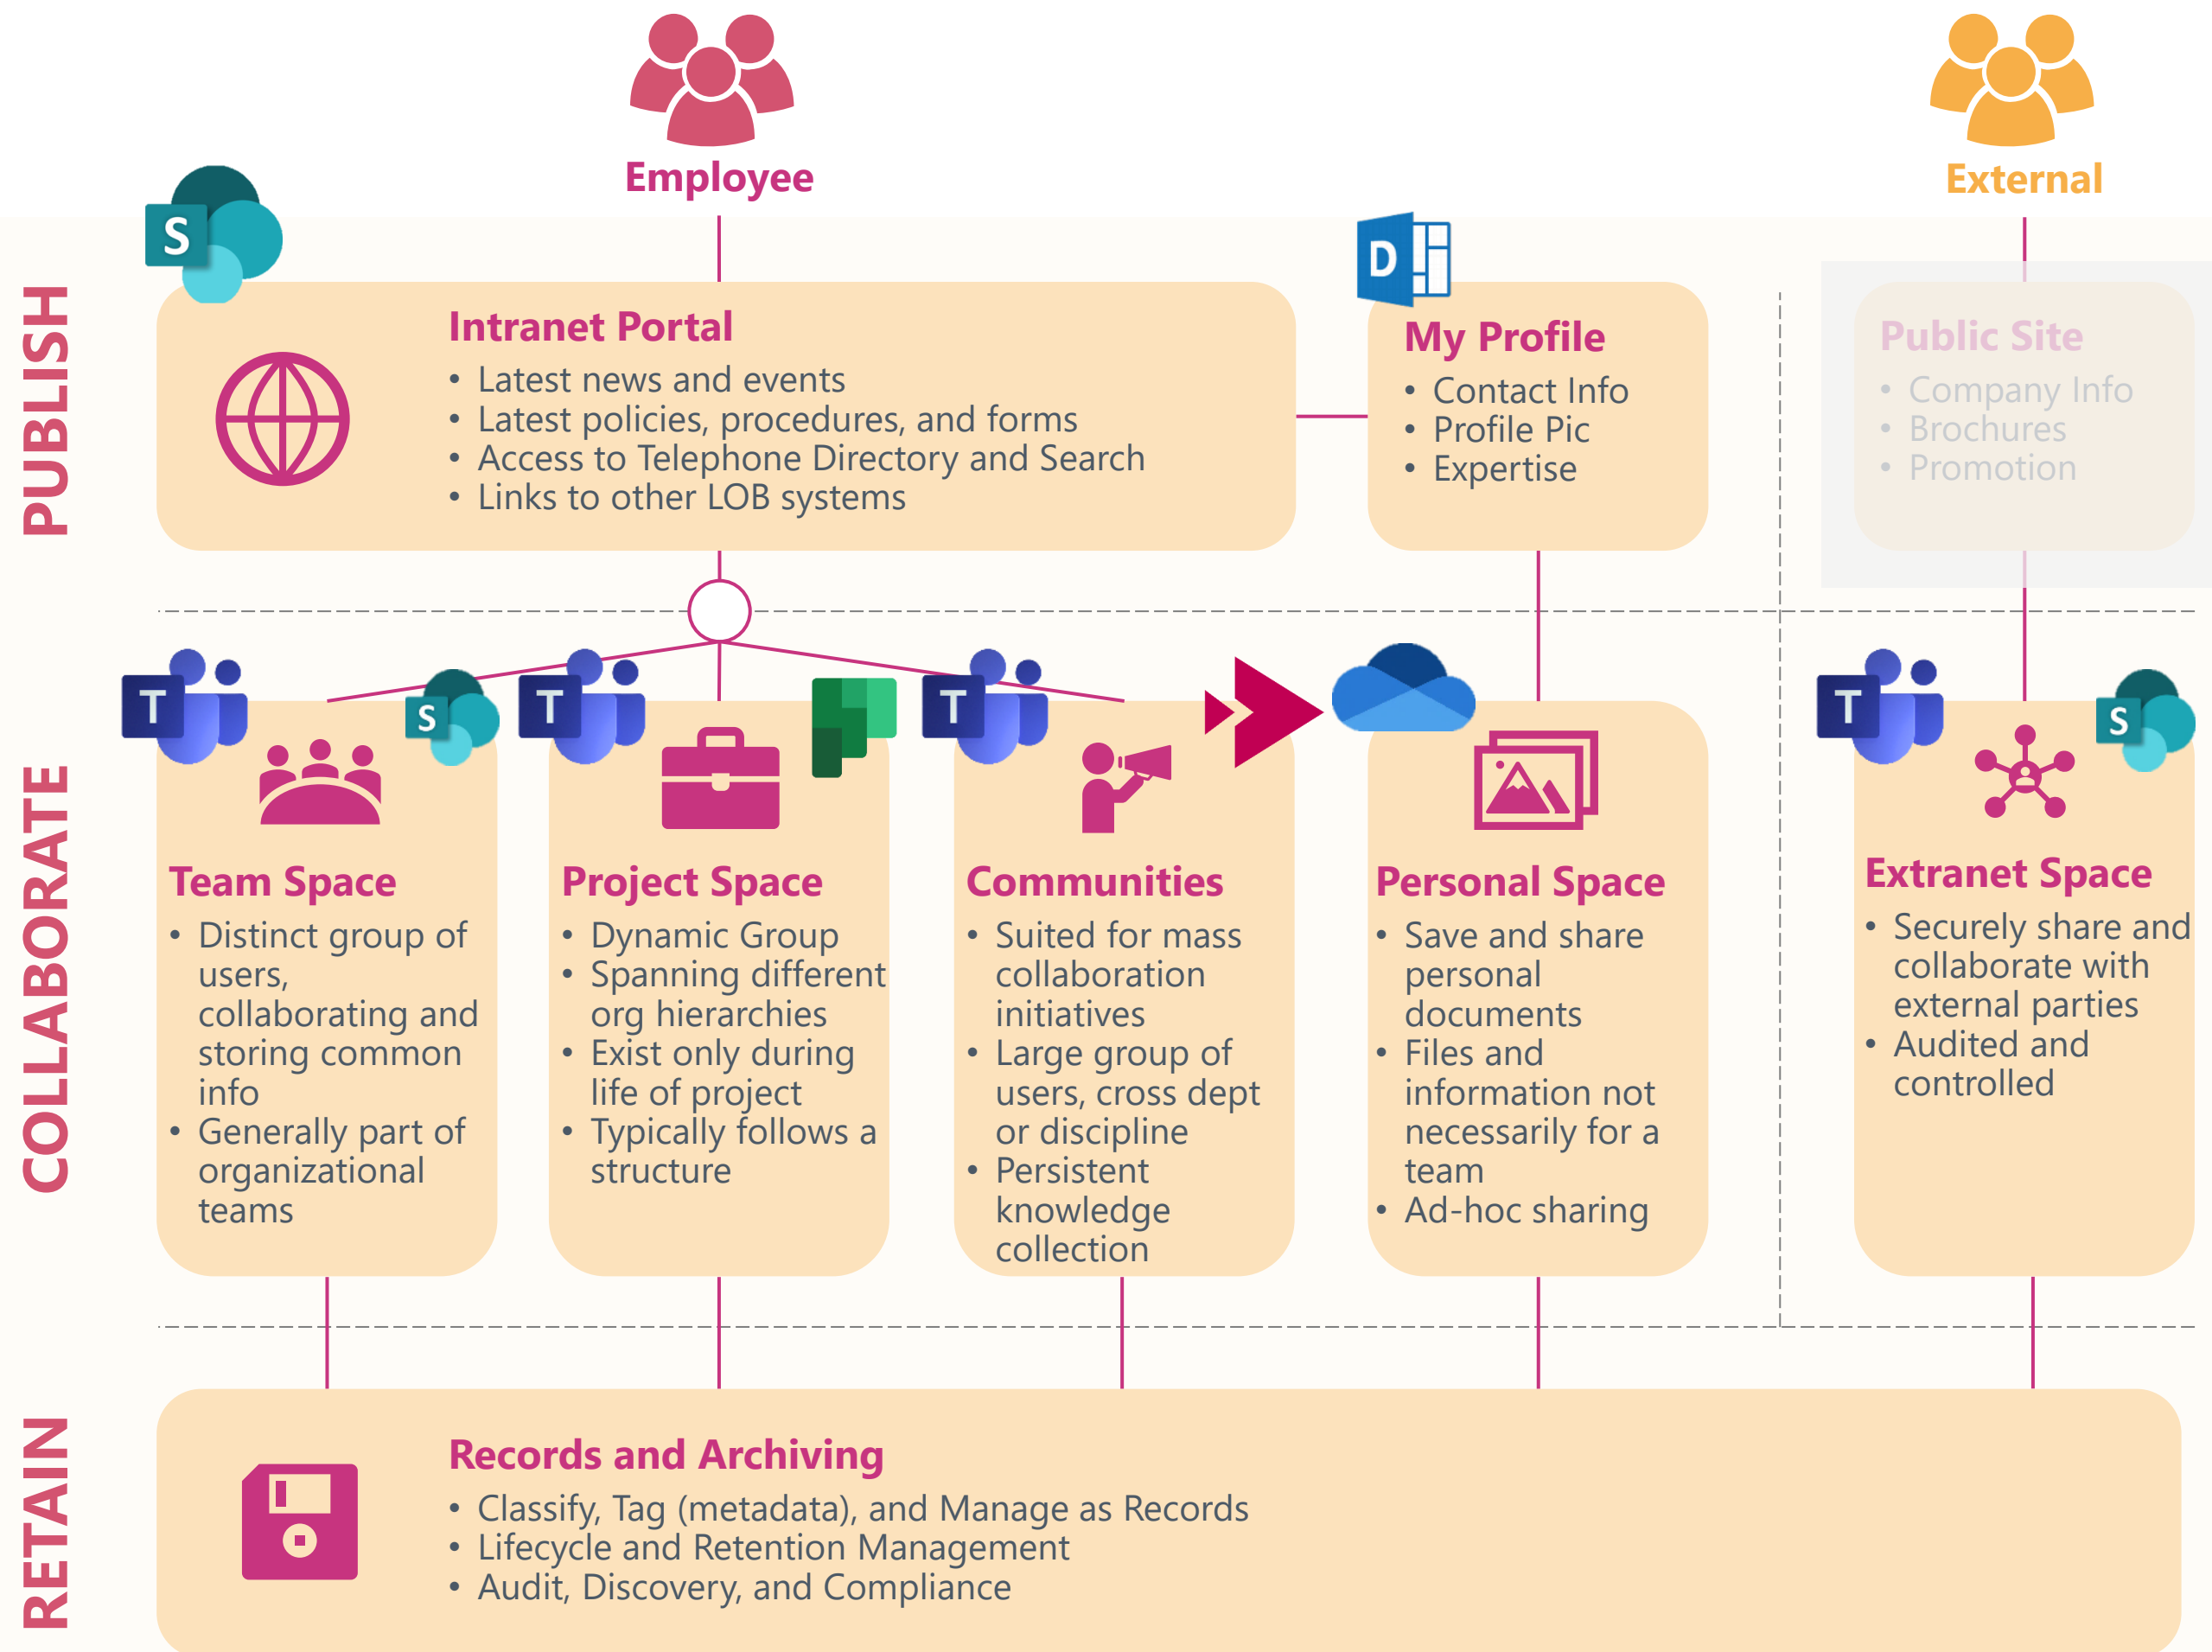

# Information Architecture Perspectives

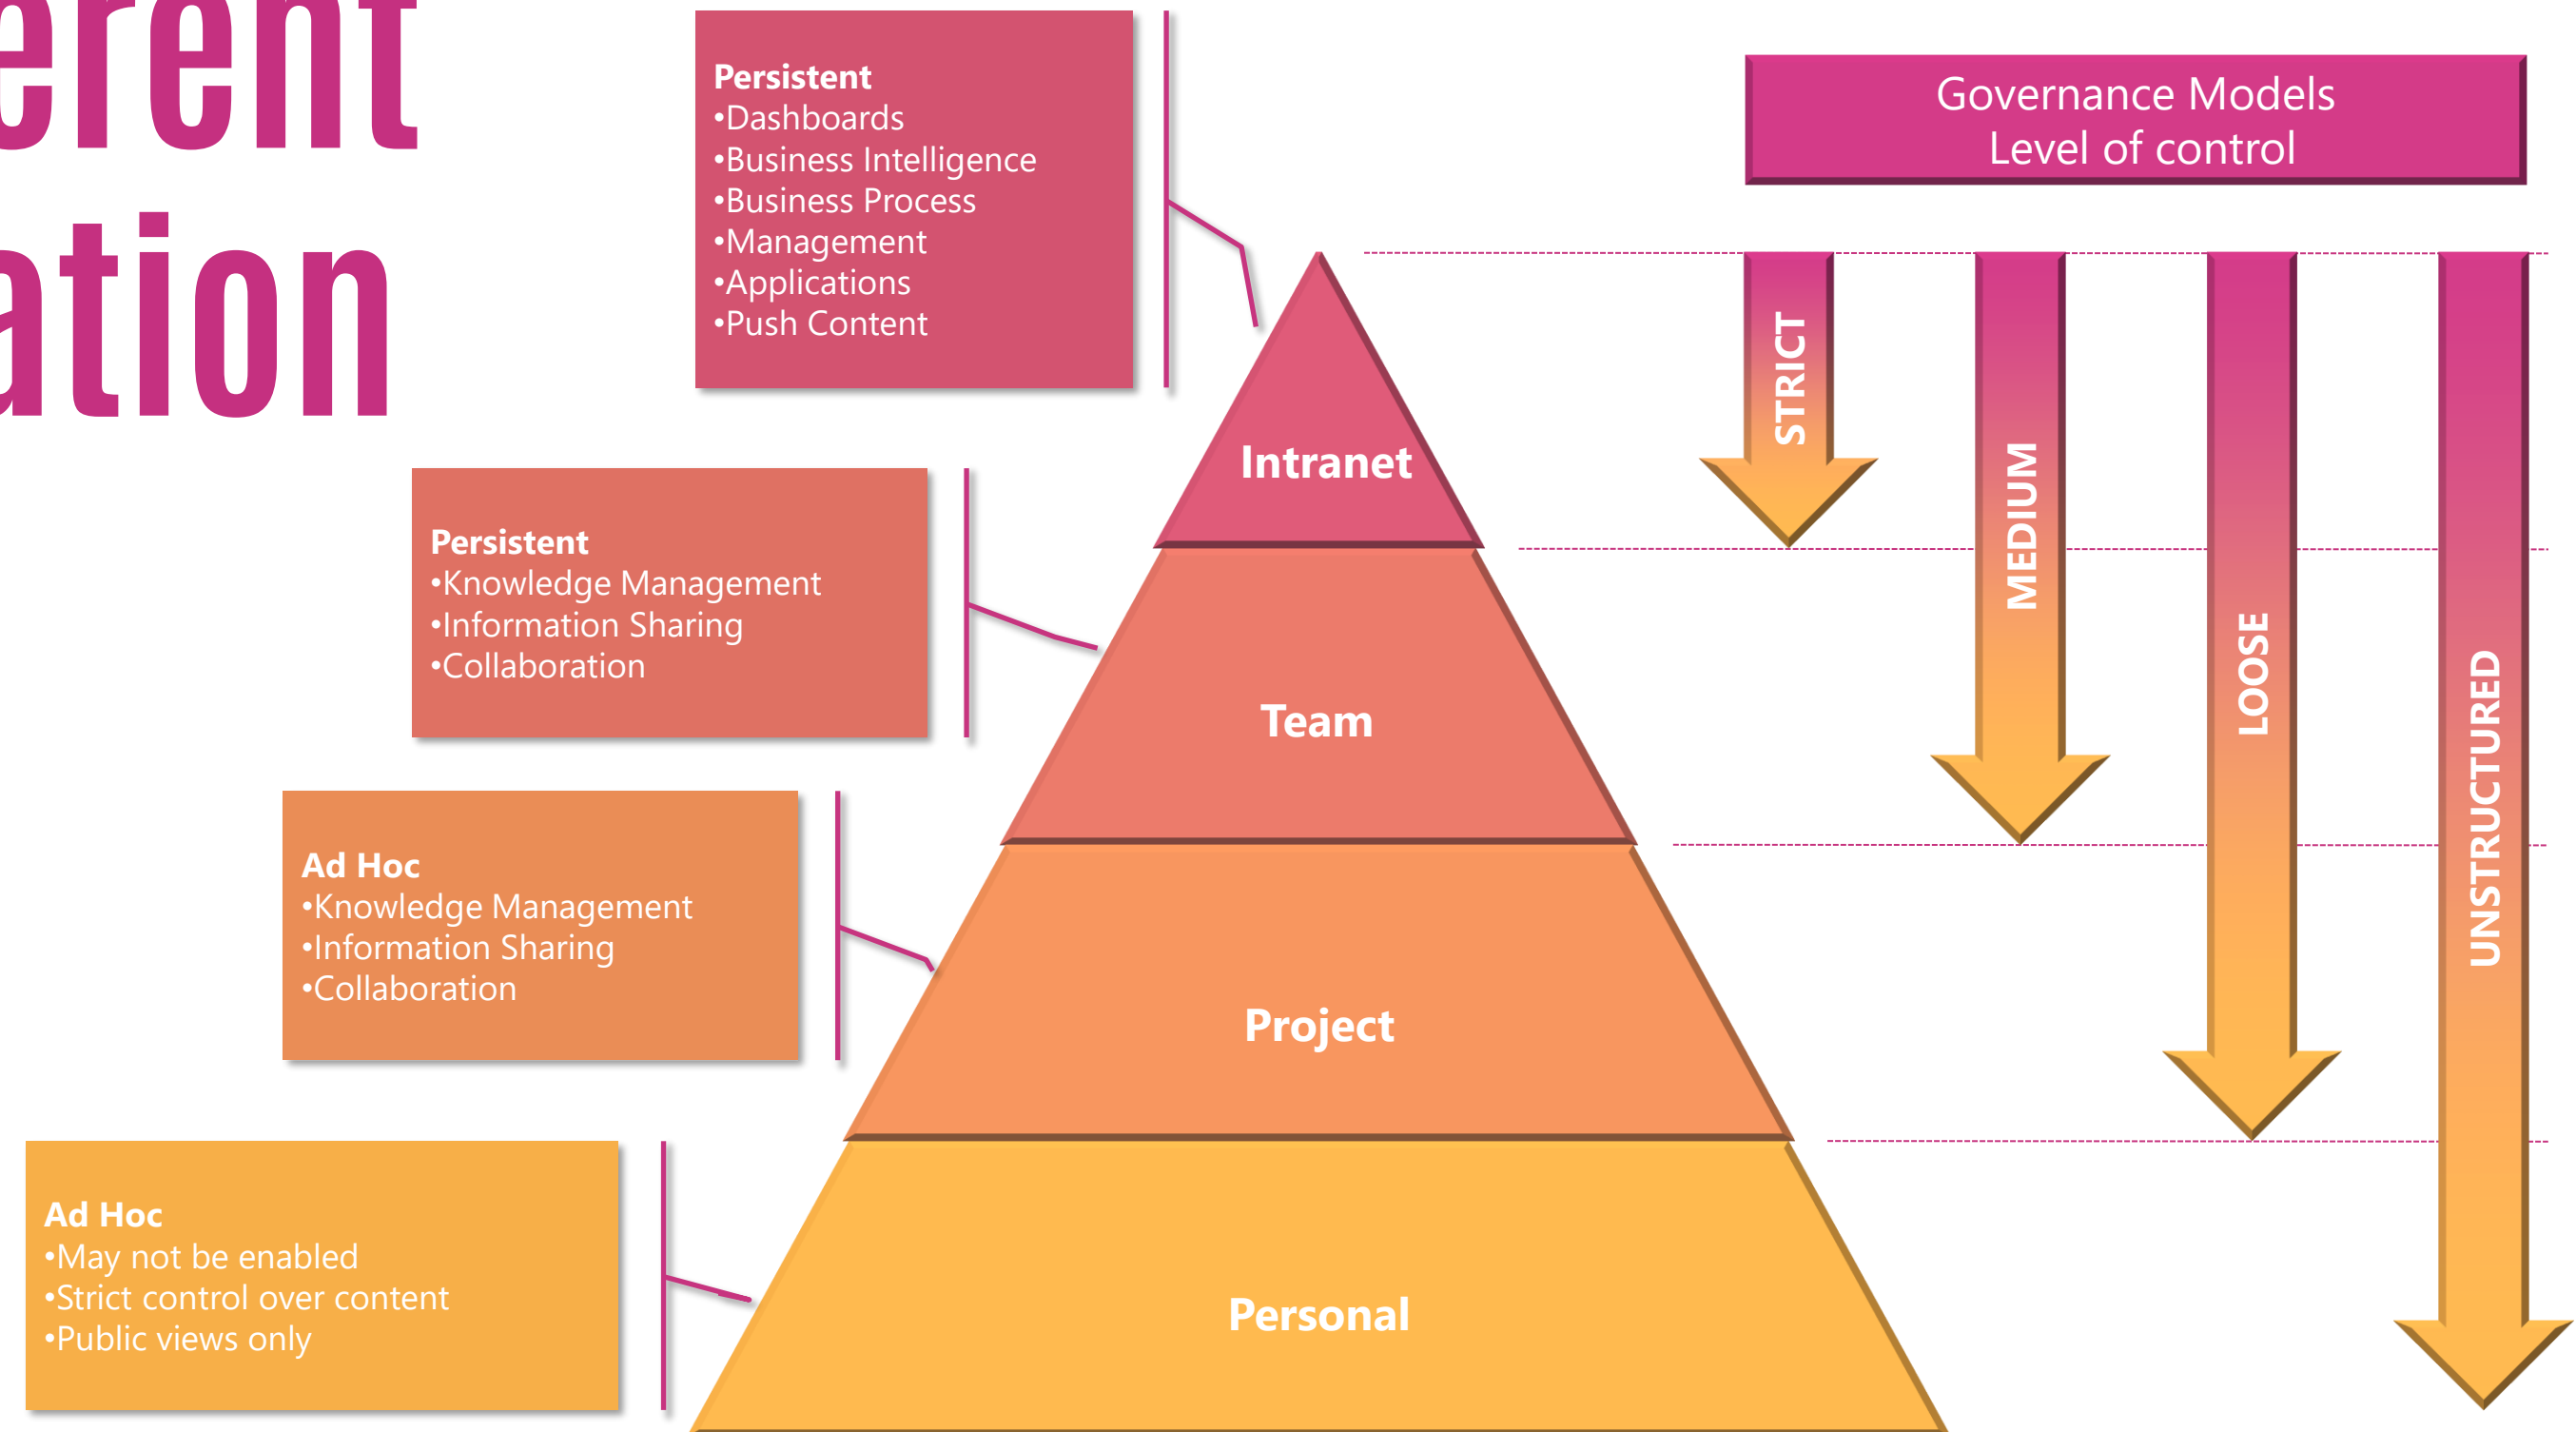

# A Best-Practice Approach to Information Architecture and Knowledge Management in Microsoft 365

*Don't try and organize your information by department... think about the information type instead.*

# Different Strategies for Different Information

# & Different Service Definitions

Intranet (Publishing)

Team Space

Project Space

Personal Space

## Service Description

- Purpose (real world)
- Goal alignment
- Audience

## Service Functionality

- Capability
- Training
- Interaction

## Service Reachability

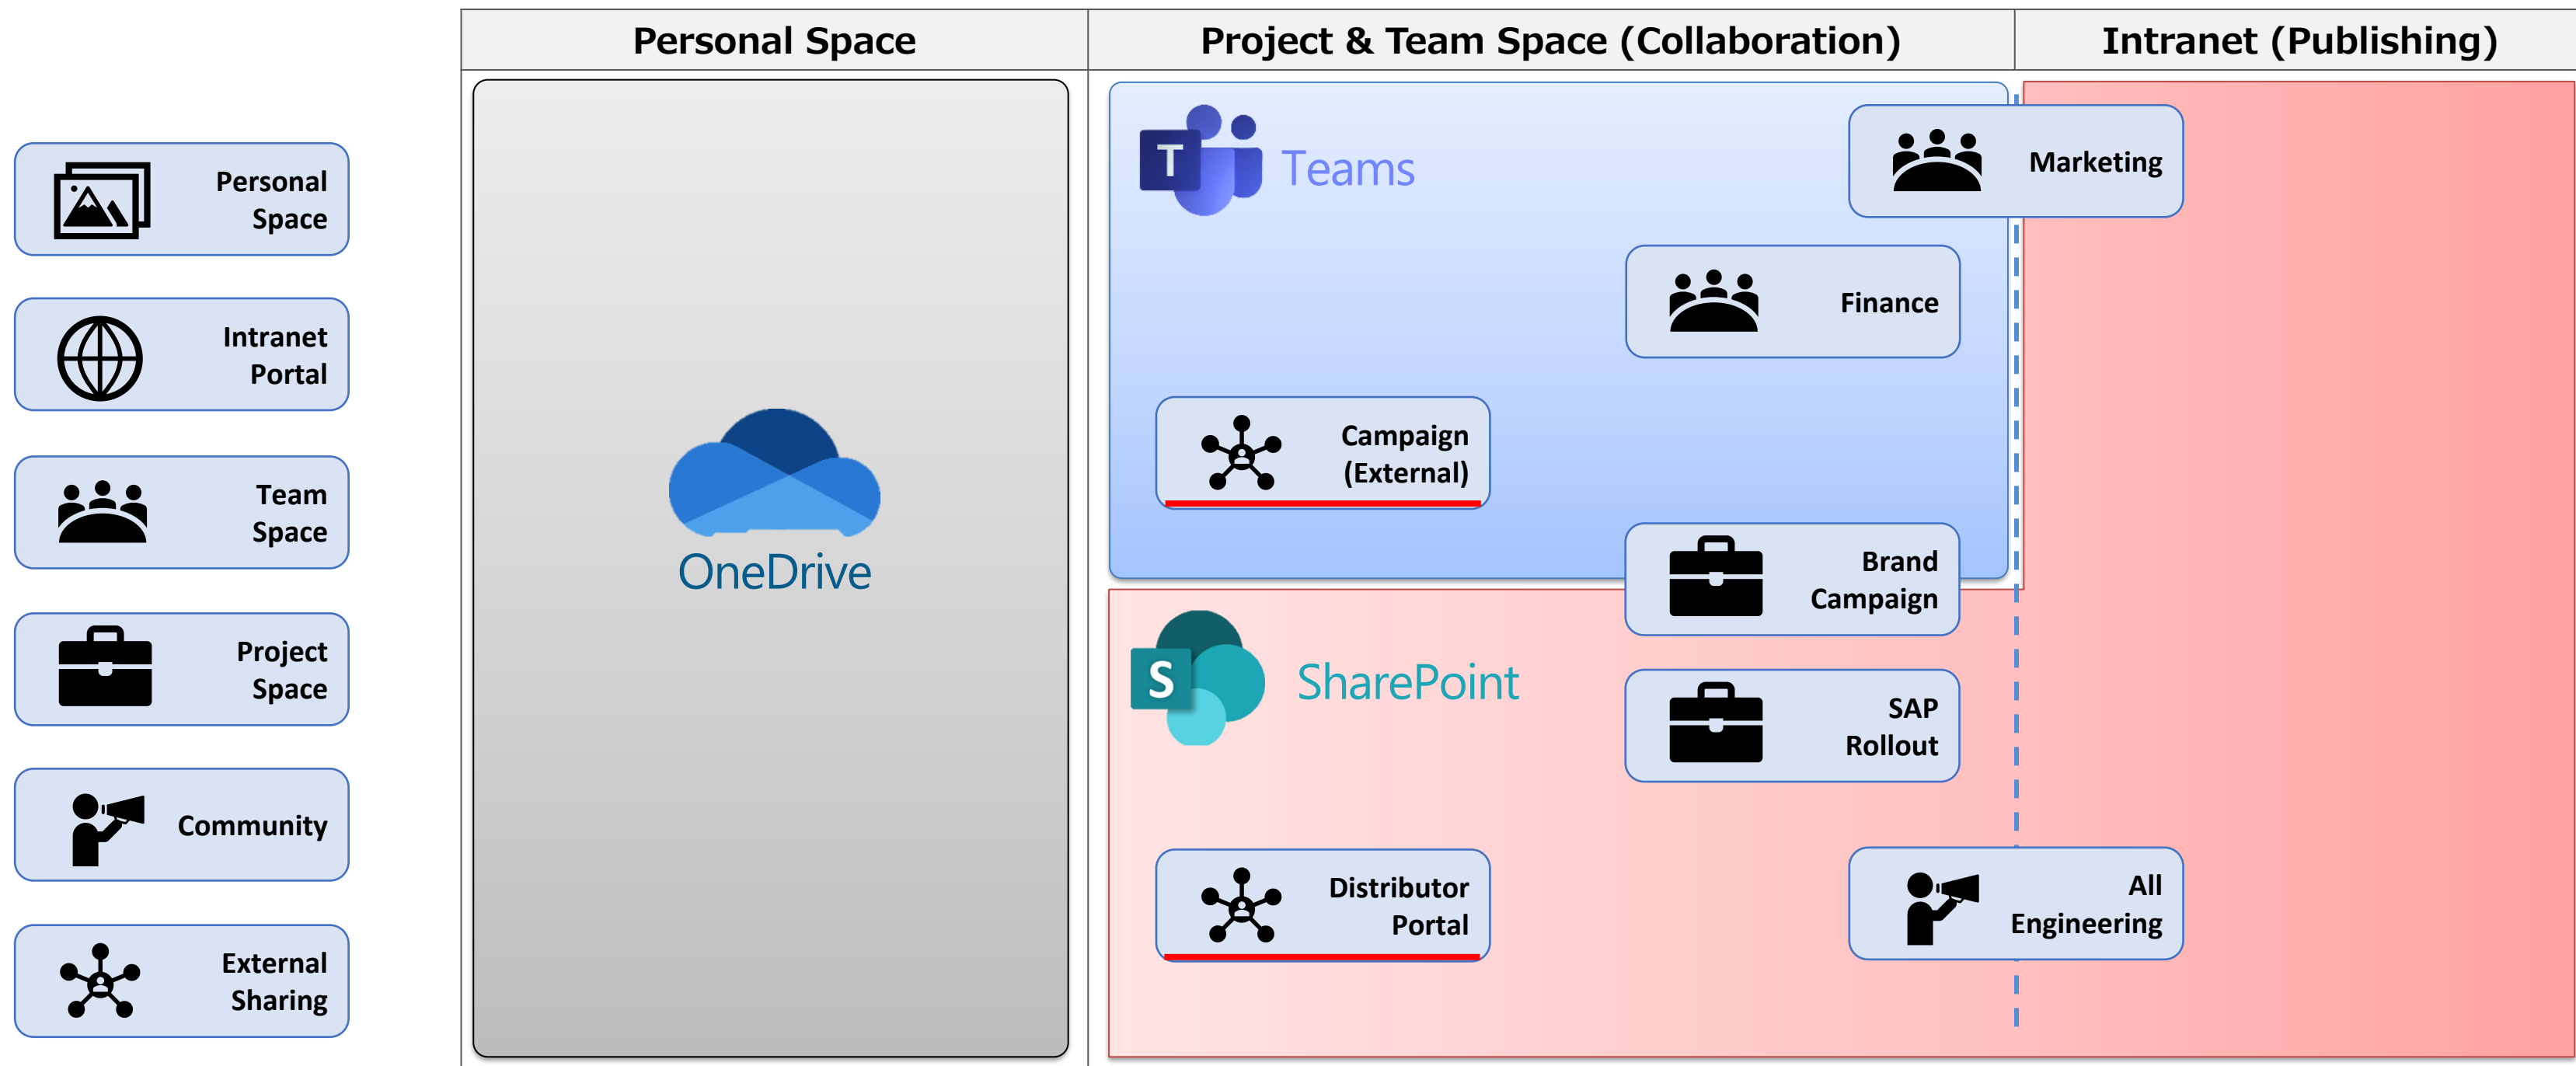

- Fact sheets
- Service Catalogue
- Protocols

## Service Policies

- Service Level Policy
- Support Information
- Service Review

# IA Mapping Exercise Example

# Why a Governance Strategy Is Useful

## The Place for Answers

- What services are supported by enterprise?
- How do I request services?
- What if I have a special request?
- Who owns this process?

## Common Ground

- Clarity provided to teams on processes and
- Expectations for services.
- Dispersed teams working from same
- information

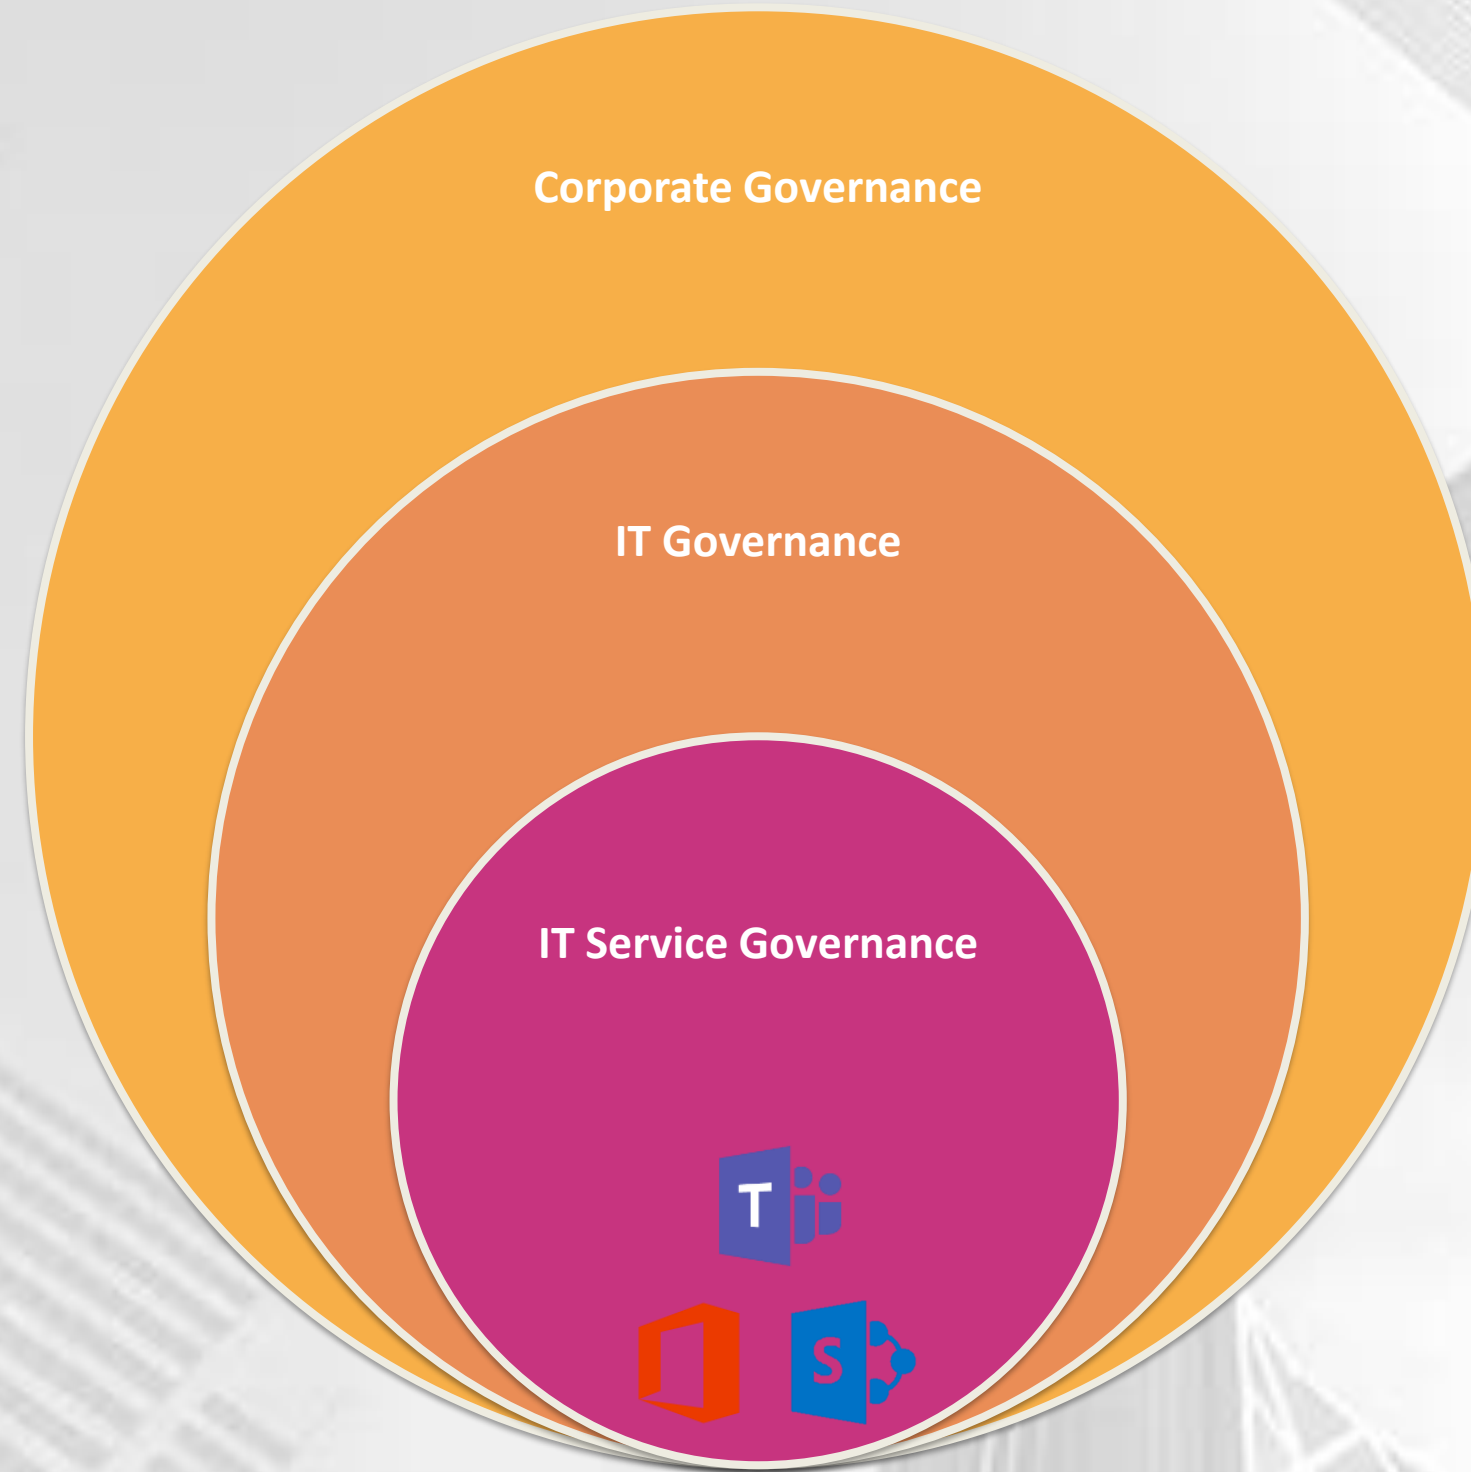

Where are the users going to look?

Resource Guide  
for the whole  
organization

Common  
Understanding of  
the Capabilities

# Governance is (much) bigger than...

# A comprehensive Governance plan

Balance business  
and Technology

Not always just  
one document

A living and  
changing  
document

Widely Available

Managed  
directly by  
relevant teams

Simple and  
Informative

# The Mission Statement

## The Mission

- What is Teams/SharePoint?
- How are we supposed to use it?

## The Stake Holders

- Who is the project sponsor?
- Who is the project champion?
- Who is the targeted audience?

## The Objectives

- How will Teams/SharePoint benefit you?

Business  
Objectives

Stakeholders

The mission and objectives statement can help answer questions like:

- *Is it available for everyone, everywhere?*
- *Are there any groups who should not be allowed to use it?*
- *Can the business run Applications on it?*
- *Who owns & Manages the system?*
- *Is it a records keeping system? Or a Collaboration system?*
- *Is it run on a charge back model?*
- *Is it supplemented by other system mission statements?*
- *What standards apply to the system?*

# Last thing ...

# Align IA & Governance to Needs

Information  
Architecture

Define Perspective  
& Approach

Identify Types of  
Workspaces

Align Workspaces  
to Controls

Review with the  
Business In Mind

Develop an  
ongoing plan

Governance

Determine initial  
principles and  
goals

Identify  
supporting  
services

Assemble teams

Develop an  
education strategy

# Questions?
