Information Barriers (IB)

M365 Gurgaon | 2020

- **Segment the users** in your enterprises per compliance requirement
- **Associate teams/sites** to specific info barrier segment, as needed
- **Achieve barriers in communication and collaboration** with this advanced conditional authorization

The image displays two screenshots from the Microsoft 365 compliance center and SharePoint admin center. The top screenshot shows the 'Information Barrier Policy' configuration page. It includes a sidebar with navigation options like Home, All Alerts, Reports, All Policies, Compliance score, and Data classification. The main content area is titled 'Information Barrier Policy' and contains a table of policies. The bottom screenshot shows the 'SharePoint admin center' with a table of 'Active sites'. A modal window titled 'Information segment' is open, showing a list of segments to select for a specific site.

Information Barrier Policy

Use information barrier policies to control communication and collaboration in M365 workload between two groups of people. [Learn more](#)

Before setting up information barriers in your org, there are some important prerequisites to consider.

Label policies

Auto-labeling (preview)

Sensitivity labels are used to classify email messages, documents, sites, and more. When a label is applied (automatically or by the user), the content or site is protected based on the settings you choose. For example, you can create labels that encrypt files, add content marking, and control user access to specific sites.

Labels

Label policies

Auto-labeling (preview)

Create auto-labeling policies to automatically apply sensitivity labels to email messages or files that contain sensitive info. To confirm that labels will be applied to the correct items, you'll first run policies simulation mode so you can review items that will be labeled when the policy is activated.
